

Additionally, the NRC staff concluded the environmental consequences from a postulated terrorist attack at the proposed Mayfield facility would not result in a significant impact to the environment.

Environmental Impacts of the Alternatives to the Proposed Action

As an alternative to the proposed action, the staff considered denial of the proposed action (i.e., the “no-action” alternative). Under the no-action alternative, the NRC would not grant the requested license to QTA and the current operations at the Mayfield site would continue. USEI currently uses the site for the occasional offloading of rail tankers containing bulk liquids that arrive at the Mayfield facility. U.S. Ecology receives tanker loads of both hazardous and non-hazardous liquids for treatment and ultimate disposal at its USEI Grand View, Idaho facility. Rail tankers containing bulk liquids are pumped into awaiting tanker trucks for transportation to the landfill.

Additionally, under the no-action alternative, NRC and NRC Agreement State licensees would continue to use their existing procedures and processes

for dispositioning LLRW. These procedures and processes would include the temporary onsite storage of such wastes and the testing and verification of these wastes prior to their shipment offsite for final disposal.

The NRC staff does not expect a change in environmental impacts under the no-action alternative given that disposal of LLRW in accordance with the Federal and State regulations and requirements ensure the protection of public health and safety and the environment. The NRC concluded that environmental impacts from the no-action alternative would be not significant.

Agencies and Persons Consulted

On November 17, 2022, the staff provided a copy of the draft EA to the Idaho Department of Environmental Quality for its review and comment. In its December 16, 2022, response letter, the State noted that it had no comments on the draft document.

III. Finding of No Significant Impact

Based on its review of the proposed action, in accordance with 10 CFR part 51, the NRC staff has determined that

issuance of a materials license to QTA, authorizing LLRW and sealed sources and devices receipt, verification, processing and temporary storage activities at the facility site near Mayfield, Idaho, would not significantly affect the quality of the human environment. Approval of the proposed action would result in minimal ground-disturbing activities at the site, and waste receipt, handling, and processing activities would be conducted to keep occupational and radiological doses below the applicable limits in 10 CFR part 20. On the basis of the EA, the NRC finds that there are no significant environmental impacts from the proposed action, and that preparation of an environmental impact statement is not warranted. Accordingly, the NRC has determined that a FONSI is appropriate. In accordance with 10 CFR 51.32(a)(4), this FONSI incorporates the EA set forth in this notice by reference.
