

exceeded the most recent year's recreational ACL will be deducted from the following year's recreational ACT, or as soon as possible thereafter, once catch data are available. This payback may be evenly spread over 2 years if doing so allows for use of identical recreational management measures across the upcoming 2 years.

(2) *If biomass is above the threshold, but below the target, and the stock is not under rebuilding.* If the most recent estimate of biomass is above the biomass threshold (B/B_{MSY} is greater than 0.5), but below the biomass target (B/B_{MSY} is less than 1.0), and the stock is not under a rebuilding plan, then the following AMs will apply:

(i) *If the recreational ACL has been exceeded.* If the recreational ACL has been exceeded, then adjustments to the recreational management measures, taking into account the performance of the measures and conditions that precipitated the overage, will be made in the following fishing year, or as soon as possible thereafter, once catch data are available, as a single-year adjustment.

(ii) *If the fishing mortality (F) has exceeded FMSY (or the proxy).* If the most recent estimate of total fishing mortality exceeds FMSY (or the proxy) then an adjustment to the recreational ACT will be made as soon as possible once catch data are available. If an estimate of total fishing mortality for the most recent complete year of catch data is not available, then a comparison of total catch relative to the ABC will be used.

(A) *Adjustment to Recreational ACT.* If an adjustment to the following year's Recreational ACT is required, then the ACT will be reduced by the exact amount, in pounds, of the product of the recreational ACL overage and the payback coefficient, as specified in paragraph (d)(2)(ii)(B) of this section. This payback may be evenly spread over 2 years if doing so allows for use of identical recreational management measures across the upcoming 2 years.

(B) *Payback coefficient.* The payback coefficient is the difference between the most recent estimates of B_{MSY} and biomass (*i.e.*, $B_{MSY} - B$) divided by one-half of B_{MSY} .

(3) *If biomass is above BMSY.* If the most recent estimate of biomass is above BMSY (*i.e.*, B/B_{MSY} is greater than 1.0), then adjustments to the recreational management measures, taking into account the performance of the measures and conditions that precipitated the overage, will be made in the following fishing year, or as soon as possible thereafter, once catch data

are available, as a single-year adjustment.

* * * * *

(f) *Non-landing AMs.* In the event that the fishery-level ACL has been exceeded and the overage has not been accommodated through the AM measures in paragraphs (a) through (d) of this section, then the exact amount, in pounds, by which the fishery-level ACL was exceeded shall be deducted, as soon as possible, from subsequent, single fishing year ACTs. The payback will be applied to each sector's ACT in proportion to each sector's contribution to the overage.

BILLING CODE 3510-22-P

DEPARTMENT OF COMMERCE

National Oceanic and Atmospheric Administration

50 CFR Part 679

[Docket No. 230224-0053 and 230306-0065; RTID 0648-XC767]

Fisheries of the Exclusive Economic Zone Off Alaska; Sablefish Managed Under the Individual Fishing Quota Program

AGENCY: National Marine Fisheries Service (NMFS), National Oceanic and Atmospheric Administration (NOAA), Commerce.

ACTION: Temporary rule; opening.

SUMMARY: NMFS is opening directed fishing for sablefish with fixed gear managed under the Individual Fishing Quota (IFQ) Program and the Community Development Quota (CDQ) Program. The season will open 1200 hours, Alaska local time (A.l.t.), March 10, 2023, and will close 1200 hours, A.l.t., December 7, 2023. This period is the same as the 2023 commercial halibut fishery opening dates adopted by the International Pacific Halibut Commission. The IFQ and CDQ halibut season is specified by a separate publication in the **Federal Register** of annual management measures.

DATES: Effective 1200 hours, A.l.t., March 10, 2023, until 1200 hours, A.l.t., December 7, 2023.

FOR FURTHER INFORMATION CONTACT: Obren Davis, 907-586-7228.

SUPPLEMENTARY INFORMATION: Beginning in 1995, fishing for Pacific halibut and sablefish with fixed gear in the IFQ regulatory areas defined in 50 CFR 679.2 has been managed under the IFQ Program. The IFQ Program is a

regulatory regime designed to promote the conservation and management of these fisheries and to further the objectives of the Magnuson-Stevens Fishery Conservation and Management Act and the Northern Pacific Halibut Act. Persons holding quota share receive an annual allocation of IFQ. Persons receiving an annual allocation of IFQ are authorized to harvest IFQ species within specified limitations. Further information on the implementation of the IFQ Program, and the rationale supporting it, are contained in the preamble to the final rule implementing the IFQ Program published in the **Federal Register**, November 9, 1993 (58 FR 59375) and subsequent amendments.

This announcement is consistent with § 679.23(g)(1), which requires that the directed fishing season for sablefish managed under the IFQ Program be specified by the Administrator, Alaska Region, and announced by publication in the **Federal Register**. This method of season announcement was selected to facilitate coordination between the sablefish season, chosen by the Administrator, Alaska Region, and the halibut season, adopted by the International Pacific Halibut Commission (IPHC). The directed fishing season for sablefish with fixed gear managed under the IFQ Program will open 1200 hours, A.l.t., March 10, 2023, and will close 1200 hours, A.l.t., December 7, 2023. This period runs concurrently with the IFQ season for Pacific halibut announced by the IPHC. The IFQ and CDQ halibut season will be specified by a separate publication in the **Federal Register** of annual management measures pursuant to 50 CFR 300.62.

Classification

NMFS issues this action pursuant to section 305(d) of the Magnuson-Stevens Act. This action is required by 50 CFR part 679, which was issued pursuant to section 304(b), and is exempt from review under Executive Order 12866.

Pursuant to 5 U.S.C. 553(b)(B), there is good cause to waive prior notice and an opportunity for public comment on this action, as notice and comment would be impracticable and contrary to the public interest, as it would delay the opening of the sablefish fishery thereby increasing bycatch and regulatory discards between the sablefish fishery and the halibut fishery, and preventing the accomplishment of the management objective for simultaneous opening of these two fisheries. NMFS was unable to publish a notice providing time for public comment because the most recent, relevant data only became available as of March 6, 2023.

The Assistant Administrator for Fisheries, NOAA also finds good cause to waive the 30-day delay in the effective date of this action under 5 U.S.C. 553(d)(3). This finding is based

upon the reasons provided above for waiver of prior notice and opportunity for public comment.

Authority: 16 U.S.C. 1801 *et seq.*

Dated: March 7, 2023.

Jennifer M. Wallace,

Acting Director, Office of Sustainable Fisheries, National Marine Fisheries Service.
