l. The Franklin Falls Project consists of the following existing facilities: (1) a 148-foot-long, 45-foot-high concrete overflow-type dam at a crest elevation of 1,462.88 feet National Geodetic Vertical Datum of 1929 (NGVD 29) with 2-foot-high flashboards; (2) a reservoir with a surface area of 479 acres and a gross storage capacity of 5,580 acre-feet at pool elevation 1,464.88 feet NGVD 29; (3) an integrated 28-foot-long gated intake structure located on the dam's right (south) side; (4) a 10.5-foot-diameter, 300-foot-long steel pipeline; (5) a 43-foot-high surge tank with a 20-foot-diameter steel shaft; (6) two 10-foot-diameter, 38-foot-long steel penstocks; (7) a powerhouse containing two generating units having a total rated capacity of 2.12 megawatts; (8) 85-foot-long, 2.3-kilovolt (kV) generator leads; (9) a 2.3/46-kV step-up transformer bank; (10) a 300-foot-long, 46-kV transmission line; (11) a tailrace; and (12) appurtenant facilities.

The Franklin Falls Project operates in a modified run-of-river mode. If inflow exceeds the hydraulic capacity of the units, the project operates continuously at full load. When the inflow is less than the hydraulic capacity of the project, the project is operated in a run-of-river mode utilizing pondage as needed for daily flow regulation and to suit power requirements of the New York Independent System Operator. The project has an average annual generation of 10,349 megawatt-hours.

Erie does not propose changes to project facilities or operations. Erie proposes to continue to: (1) provide a minimum base flow of 245 cubic feet per second (cfs) or inflow, whichever is less, from March 1 through June 1 from the Franklin Falls powerhouse; and from June 2 to March 1 reservoir inflow is released from the powerhouse, as needed for the downstream Saranac Project to maintain a minimum base flow of 165 cfs, or inflow, whichever is less; (2) limit the maximum total drawdown of the Franklin Falls impoundment to 2 feet below the top of the flashboards, or 1 foot below the spillway crest when flashboards are not in use (Erie annually installs flashboards at Franklin Falls by the first week of June, unless flow conditions warrant otherwise); (3) provide a minimum flow to the bypassed reach of 125 cfs or inflow, whichever is less, from March 31 through May 31 for the protection of walleye spawning and incubation (the release schedule may be modified on a year-to-year basis based on water temperatures and presence/absence of walleye, upon mutual agreement between the licensee and the New York State Department of Environmental Conservation; and (4) operate and maintain the cartop boat launch and canoe portage.

Erie proposes to modify the project boundary by removing approximately 1.12 acres along the northern shoreline, which are not needed for project operations, and adding approximately 0.14 acre to include the project's existing hand-carry boat launch. In addition, Erie proposes to implement its proposed bald eagle management plan, invasive species management plan, and impoundment drawdown plan.
