

manufacturer's instruction manuals into their MSHA part 46 training plan and train affected miners in the process.

(d) Miners entering the booth shall examine valves and nozzles for damage or malfunction and will close the door fully before opening the air valve. Any defects shall be repaired prior to the booth being used.

(e) Miners entering the booth shall wear eye protection, ear plugs or muffs for hearing protection, and respiratory protection meaning a full-face or half-mask respirator that meets or exceeds the minimum requirements of an N95 filter to which the miner has been fit-tested. As an alternative, the use of a full-face respirator will also meet the requirement for eye protection. A sign will be conspicuously posted that states the above personal protective equipment is required when entering the booth.

(f) Air flow through the booth will be at least 2,000 cubic feet per minute (cfm) to maintain negative pressure during the use of the cleaning system in order to prevent contamination of the environment outside the booth. Airflow will be in a downward direction, thereby moving contaminants away from the miner's breathing zone.

(g) Air pressure through the spray manifold will be limited to 30 pounds per square inch or less. A lock box with a single, plant manager-controlled key will be used to prevent regulator tampering.

(h) The spray manifold will consist of a 2-inch square tube with 1/4 inch wall thickness, capped at the base and actuated by an electrically controlled valve at the top.

(i) Air nozzles shall not exceed 30 pound(s) per square inch gauge.

(j) The uppermost spray of the spray manifold will be located below the booth user's breathing zone. Some type of mechanical device can be used to cover the upper air nozzles to meet the specific height of the user.

(k) Air nozzles shall be guarded to eliminate the possibility of incidental contact, which could create mechanical damage to the air nozzles during the clothes cleaning process.

(l) The petitioner shall conduct periodic maintenance checks of the booth in accordance with the recommendations contained in the manufacturer's instruction manual.

(m) The air receiver tank supplying air to the manifold system will be of sufficient volume to permit no less than 20 seconds of continuous cleaning time.

(n) An appropriate hazard warning sign will be posted on the booth to state, at a minimum, "Compressed Air" and "Respirable Dust."

(o) A pressure relief valve designed for the booth's air reservoir will be installed.

(p) The mine will exhaust dust-laden air from the booth into a local exhaust ventilation system or duct outside the facility while ensuring there is no re-entrainment back into the structure.

In support of the proposed alternative method, the petitioner submitted specifications of the dust booth; installation and operating instructions of the dust booth to be used; and The Dust Control Handbook for Industrial Minerals, Mining, and Processing.

The petitioner asserts that the alternate method proposed will at all times guarantee no less than the same measure of protection afforded the miners under the mandatory standard.
