

collection, the National Institute of Health is collecting audience feedback on a selection of survey questions and research protocols. Parents/caregivers and teens who are the same age as the study cohort members but who are not Study participants will review proposed questions and give feedback on questions' clarity and acceptability. Recommendations from these findings help the ABCD Study team improve

their protocol for a more-successful data collection. Audience feedback activities will include a mix of asynchronous and scheduled, live data collection: web-based survey activities, virtual discussion boards, individual interviews, and discussions groups. Assembling a cohort of audience feedback participants who are familiar with the ABCD Study and participate in

multiple data collection activities minimizes the burden required to familiarize new participants with the purpose of the Study and the expectations for audience feedback. OMB approval is requested for 3 years. There are no costs to respondents other than their time. The total estimated annualized burden hours are 172.
