SUPPLEMENTARY INFORMATION:

Correction

In the **Federal Register** of March 7, 2024, 89 FR 16504, on pages 16504–16509, the Synopsis and Initial Regulatory Flexibility Analysis should be replaced with the corrected Synopsis and Initial Regulatory Flexibility Analysis sections below.

Synopsis

In furtherance of the Commission's continued emphasis on improving the accessibility of alerts, we seek comment on additional measures to promote multilingual EAS. As the Commission observed in 2016, when it required reporting of multilingual activities as updates to State EAS Plans, “[t]o the extent that the reports suggest that [those who do not have a proficiency in English] are not receiving critical emergency information, the Commission . . . can assess, if appropriate, what further steps should be taken.” In light of the minimal issuance of EAS messages in languages other than English, we believe it is now appropriate to take further steps to promote multilingual alerting.

Accordingly, as detailed below, we seek comment on the efficacy and feasibility of distributing multilingual

EAS messages in the form of brief, pre-scripted (or “template”) alerts in Arabic, Chinese, French, German, Haitian Creole, Hindi, Italian, Korean, Portuguese, Russian, Spanish, Tagalog, and Vietnamese, as well as in English. The template scripts (in all languages) would be stored in EAS devices, and the translated audio for each template would be provided as audio files or links to streaming audio. EAS Participants would be required to transmit template alerts using the template audio and script in the template language that correspond to the EAS Participants' primary language (*i.e.*, the language of their programming content); where the EAS Participant offers multiple channels, it would transmit on such channels the template audio and script in the template language that corresponds to the language of such channels.

Current CAP-Based Multilingual Approach. As an initial matter, we observe that the ECIG Implementation Guide provides a process through which alert originators can specify distribution of their alerts in multiple languages, and EAS Participants can elect to distribute—or not distribute—the alert in those languages. Under those procedures, the alert originator specifies in its CAP alert instructions the language in which it desires the alert to be transmitted to the public, and the EAS device then will process and transmit the alert in those languages if (i) the language is the EAS Participant's “primary” or “secondary” language that the EAS Participant has programmed its EAS device to process and transmit, and (ii) an audio file containing the translated audio or URL link to streaming translated audio is supplied by the alert originator, or TTS in that language has been configured in the EAS device. If the device is programmed to relay the primary language and secondary languages, the alert can be relayed in multiple languages as a single alert, provided the combined audio does not exceed 2 minutes and the combined visual crawl characters do not exceed 1,800 characters (including the required header code information). In those instances where the message cannot meet the 2-minute and/or 1,800 character limit, only the “primary” language is transmitted to the public as a self-contained alert—the “secondary” languages are transmitted after the original alert's End-of-Message codes (which terminates the alert) have run (*i.e.*, after the alert is over, at which point, the additional languages are essentially being aired as regular programming (*i.e.*, no EAS header
