

Fabric Width:

Metric: 152–195 cm

English: 59.8–76.8 inches

Finish: Yarn Dye of Various Color

Remarks: The yarn size designations describe a range of yarn specifications for yarn before knitting, dyeing and finishing of the fabric. They are intended as specifications to be followed by the mills in sourcing yarn used to produce the fabric. Dyeing, finishing, and knitting can alter the characteristic of the yarn as it appears in the finished fabric. This specification therefore includes yarns appearing in the finished fabric as finer or coarser than the designated yarn sizes provided that the variation occurs after processing of the greige yarn and production of the fabric. The specifications for the fabric apply to the fabric itself prior to cutting and sewing of the finished garment. Such processing may alter the measurements.

Chairman, Committee for the Implementation of Textile Agreements.

SUPPLEMENTARY INFORMATION:

Title; Associated Form; and OMB Number: Homer Small Boat Harbor Vessel Survey; OMB Control Number 0710-HSBH.

Needs and Uses: The Alaska District of the Corps of Engineers is currently conducting a general investigation into the feasibility of building a second harbor in Homer, Alaska. The small boat harbor which exists there currently is overcrowded, and enlarging it is not feasible given the geography of the area. This project would be intended to reduce delays and safety risks resultant from overcrowding by building a second harbor adjacent to the existing one. The purpose of this survey is to collect data crucial to estimate delay times and

associated costs in the existing conditions upon which formulated alternative plans will be compared. The data collected will also inform benefits associated with project alternatives. This data collection is essential for development of an accurate model because there is no readily available data on vessel movement patterns or delays in Alaskan small boat harbors, which are generally multi-use, serving commercial and subsistence fishing, freight, recreational boaters, and others. Many of these boats do not have Automatic Identification System transponders and harbors do not keep data on vessel movements or delays.
