**SUPPLEMENTARY INFORMATION:**

**I. Background**

The Department of Labor, as part of the continuing effort to reduce paperwork and respondent (*i.e.*, employer) burden, conducts a preclearance consultation program to provide the public with an opportunity to comment on proposed and continuing information collection requirements in accordance with the Paperwork Reduction Act of 1995 (PRA) (44 U.S.C. 3506(c)(2)(A)). This program ensures that information is in the desired format, reporting burden (time and costs) is minimal, the collection instruments are clearly understood, and OSHA's estimate of the information collection burden is accurate. The Occupational Safety and Health Act of 1970 (OSH Act) (29 U.S.C. 651 *et seq.*) authorizes information collection by employers as necessary or appropriate for enforcement of the OSH Act or for developing information regarding the causes and prevention of occupational injuries, illnesses, and accidents (29 U.S.C. 657). The OSH Act also requires that OSHA obtain such information with minimum burden upon employers,

especially those operating small businesses, and to reduce to the maximum extent feasible unnecessary duplication of effort in obtaining information (29 U.S.C. 657).

The following sections describe who uses the information collected under each requirement, as well as how they use it.

Seven paragraphs in the Underground Construction Standard ("the Standard"), 29 CFR 1926.800, require employers to post warning signs or notices during underground construction; these paragraphs are (b)(3), (i)(3), (j)(1)(vi)(A), (m)(2)(ii), (o)(2), (q)(11), and (t)(1)(iv)(B). The warning signs and notices required by these paragraphs enable employers to effectively alert workers to the presence of hazards or potential hazards at the job site, thereby preventing worker exposure to hazards or potential hazards associated with underground construction that could cause death or serious harm.

Paragraph (t)(3)(xxi) of the Standard requires employers to inspect and load test hoists when they install them, and at least annually thereafter. They must also inspect, and load test a hoist after making any repairs or alterations to it that affect the structural integrity, and after tripping a safety device on the hoist. Employers must also prepare a certification record of each inspection and load test that includes specified information and maintain the most recent certification record until they complete the construction project.

Establishing and maintaining a written record of the most recent inspection and load test alerts equipment mechanics to problems identified during the inspection. Prior to returning the equipment to service, employers can review the records to ensure that the mechanics performed the necessary repairs and maintenance. Accordingly, by using only equipment that is in safe working order, employers will prevent severe injury and death to the equipment operators and other workers who work near the equipment. In addition, these records provide the most efficient means for OSHA compliance officers to determine that an employer performed the required inspections and load tests, thereby assuring that the equipment is safe to operate.

Paragraph (j)(3) of the Standard mandates that employers develop records for air quality tests performed under paragraph (j), including air quality tests required by paragraphs (j)(1)(ii)(A) through (j)(1)(iii)(A), (j)(1)(iii)(B), (j)(1)(iii)(C), (j)(1)(iii)(D), (j)(1)(iv), (j)(1)(v)(A), (j)(1)(v)(B), and (j)(2)(i) through (j)(2)(v). Paragraph (j)
