Project Narrative

The Coonamesset Farm Foundation, Inc. (CFF) is requesting an EFP in support of a study aimed at better understanding how demersal gillnet baiting practices influence shearwater bycatch off the coast of Cape Cod. In the subject fishery, vessels harvest and process skates, and then use the skate racks to bait gillnets that are deployed to target dogfish, which can result in bycaught seabirds. This EFP would be for the first year of a 2-year study.

Under the EFP, three participating vessels would be exempt from Northeast Fishery Observer Program monitoring coverage due to limited vessel space and safety equipment needed to accommodate CFF personnel during research trips. No other exemptions are needed to perform this project. Vessels will target dogfish using 6.5-inch (16.5-centimeter) mesh gillnets set in strings consisting of 12 nets each. Of the 12 nets, half will utilize either forward baiting (baiting nets before setting) or after baiting (baiting nets after setting), and the remaining nets will not include bait. CFF intends to use retained and discarded catch weights to assess the effect that different baiting treatments have on catch. Any entangled seabird will be documented in detail. CFF intends to use cameras to quantify behavior and abundance of seabird species in the study area using cameras. The results will determine if high levels of seabird bycatch correlate with specific gillnet baiting strategies.

CFF, or contracted scientific personnel, will accompany trips under the EFP. Legal catch will be landed for

sale. If approved, the applicant may request minor modifications and extensions to the EFP throughout the year. EFP modifications and extensions may be granted without further notice if they are deemed essential to facilitate completion of the proposed research and have minimal impacts that do not change the scope or impact of the initially approved EFP request. Any fishing activity conducted outside the scope of the exempted fishing activity would be prohibited.
