Abstract: The USGS NWHC collects information on the presence of highly consequential wildlife diseases and the occurrence of wildlife morbidity/mortality events nationwide to aid in outbreak investigations conducted by land-management agencies and as part of their mission-critical activities associated with response to animal health emergencies (Emergency Support Function 11). The collected information is used in the diagnostic evaluation of specimens submitted to the NWHC and to provide situational awareness of wildlife health issues, including potential zoonotic disease threats of interest to human- and agricultural-health agencies, and species/population impacts to assist management agencies with management decisions. The NWHC requests that State, Federal, and Tribal natural-resource managers report wildlife morbidity and mortality events and collaborate on national-scale surveillance. Reported information includes the location, land ownership, and date(s) where the event occurred; where the carcass was collected or sample was taken; capture methods and sample type; species sampled; individual characteristics such as sex, age, and size; any clinical signs or other event history observed; habitat

characteristics known to affect the suspected disease process, such as habitat type, habitat cover, temperature, precipitation, or others; laboratory confirmed or suspected diagnoses; and contact information of the person reporting the event or submitting the sample. The NWHC reports back the results of diagnostic testing and cause of death (if applicable) to the submitter and other parties, such as the U.S. Fish and Wildlife Service Migratory Bird Coordinators, as applicable and provides generalized information to all users through our WHISPer platform where users can search and download current and historical trends in wildlife diseases (in accordance with the open data policy and FAIR standards).

Wildlife health information is shared in international health monitoring efforts through the NWHC’s role (along with the Canadian Wildlife Health Cooperative) as a Collaborating Centre for Research, Diagnosis, and Surveillance of Wildlife Pathogens within the World Organization for Animal Health. The NWHC is also a Reference Center for Wildlife Health and Wildlife Disease, a member of the U.S. Department of Agriculture National Animal Health Laboratory Network, and a Food and Agriculture Organization of the United Nations Reference Center for Wildlife Health and Wildlife Disease Diagnostics.

Title of Collection: Wildlife Morbidity/Mortality or Disease Surveillance Event Reporting.

OMB Control Number: 1028–NEW.

Form Number: None.

Type of Review: An existing collection without an OMB approval.

Respondents/Affected Public: Employees of State, Federal, or Tribal agencies, often but not limited to, those with land management authority. Other organizations such as universities or non-government entities often working in partnership or under permit with management agencies.

Total Estimated Number of Annual Respondents: 539.

Total Estimated Number of Annual Responses: 1723.

Estimated Completion Time per Response: Approximately 2–285 min. May vary depending on activity and data provided.

Total Estimated Number of Annual Burden Hours: 1101.

Respondent’s Obligation: Voluntary.

Frequency of Collection: Per wildlife health event, or surveillance sampling effort, frequency depends on the number of events experienced by an agency/management unit and specimen collection effort.

Total Estimated Annual Nonhour Burden Cost: None.

An agency may not conduct or sponsor, and a person is not required to respond to a collection of information unless it displays a currently valid OMB control number.

The authority for this action is the PRA of 1995 (44 U.S.C. 3501 *et seq.*).
