

Harassment in Adults: Systematic and Scoping Review to Inform Improved Care for Military Populations,” identified potential additional barriers to accessing mental health care at the VA for the active-duty population, underscoring the importance of identifying barriers to help-seeking among existing care within the Department.

To best understand the barriers and facilitators to mental health help-seeking among Active-Duty survivors of sexual trauma, information collection from installation stakeholders (DoD personnel who respond to sexual trauma, support, and assist survivors), command leaders, Active-Duty Service members and Active-Duty survivors is required to better understand their attitudes, beliefs, knowledge, and experience with available mental health care. The information collected from these listening sessions will provide critical information necessary to address barriers and make program and policy improvements that facilitate help seeking among sexual trauma supporters.
