Abstract: Recreational fishing in NPS units is allowed where it is authorized by Federal law or where it is not specifically prohibited and does not interfere with the functions of natural aquatic or riparian habitats. Angling opportunities exist in over 170 NPS units that encompass diverse aquatic environments and fish communities, including numerous species of interest to anglers. Authorized by 36 CFR 2.3

individual parks and regions, along with State agencies, are responsible for managing their fisheries and associated natural resources. This information collection is intended to create a standard Creel Survey that can be used by park units open to recreational and sports fishing. The information collected will allow park managers to assess fishing pressure, angler catch rates, and discern angling's potential effects on park resources.

Creel surveys are a common fishery management technique designed to determine the angler's catch of each species and the fishing time required to catch the fish. The information collected describes angler use, fishing pressure, fish harvest, and distribution of several important species of fish.
