Abstract: Regulations governing Safety and Environmental Management Systems (SEMS) are covered in 30 CFR 250, Subpart S and are the subject of this collection. This request also covers any related Notices to Lessees and Operators (NLTs) that BSEE issues to clarify, supplement, or provide additional guidance on some aspects of our regulations.

We consider the information to be critical for us to monitor industry's operations record of safety and environmental management on the OCS. The Subpart S regulations hold the operator accountable for the overall safety of the offshore facility, including ensuring that all employees, contractors, and subcontractors have safety policies and procedures in place that support the implementation of the operator's SEMS program and align with the principles of managing safety. An operator's SEMS program must describe management's commitment to safety and the environment, as well as policies and procedures to assure safety and environmental protection while conducting OCS operations (including those operations conducted by all personnel on the facility). BSEE will use the information obtained by submittals and observed via SEMS audits to ensure that operations on the OCS are conducted safely, as they pertain to both human and environmental factors, and in accordance with BSEE regulations, including industry practices incorporated by reference within the regulations. Job Safety Analyses (JSA's) and other recordkeeping required by the SEMS regulation will be reviewed diligently by BSEE during inspections and other oversight activities and by SEMS auditors during regulatory required audits, to ensure that industry is using the documentation required by the SEMS regulation to manage their safety and environmental risks.

Information on Form BSEE-0131, which the SEMS regulation requires to be submitted to BSEE annually, includes company identification, number of company/contractor injuries and/or illnesses suffered, company/contractor hours worked, EPA National Pollutant Discharge Elimination System (NPDES) permit non-compliances, and oil spill volumes for spills less than 1 barrel. Such information is reported on a calendar year basis, with data broken out by calendar quarter. The information is used to develop industry average incident rates that help to describe how well the offshore oil and gas industry is performing. Operators use these incident rates to benchmark against their own performance, and to focus on areas that need improvement.

Using the produced data allows BSEE to better focus our regulatory and research programs on areas where the performance measures indicate that operators are having difficulty meeting our expectations. BSEE will be more effective in leveraging resources by redirecting research efforts, promoting appropriate regulatory initiatives, and shifting inspection and Directed Audit program emphasis based on performance results.
