POLICIES AND PRACTICES FOR STORAGE OF RECORDS:

The Department electronically stores information at the AWS site referenced in the foregoing section titled "SYSTEM LOCATION." For example, the Department electronically stores, for the entire Federal Student Aid life cycle from application through loan payoff, aid applicant and aid recipient demographic and title IV, HEA aid information such as, but not limited to, FFEL program, FISL program, and Perkins Loan records at the AWS site. The Department also stores electronic master promissory notes, electronic Special Direct Consolidation Loan opportunity applications and promissory notes, electronic requests to repay a Direct Loan under an income-driven repayment plan, and Federal Direct Consolidation Loan applications and promissory notes at the AWS site. Finally, data obtained from the paper promissory notes or the paper loan discharge eligibility form are stored on hard disks at the AWS site. (These are referred to as metadata and are used by the system to link promissory notes or loan discharge eligibility forms to an aid recipient.)

POLICIES AND PRACTICES FOR RETRIEVAL OF RECORDS:

With some exceptions, the Department does not generally use the EDMAPS system for the retrieval of individual records. However, system administrators and a handful of privileged users are able to retrieve records from the EDMAPS system by award ID, customer ID, borrower ID, an individual's SSN, last name, first name, and date of birth. Further, the Department uses the EDMAPS system to retrieve individual records to process eligibility information and other information about aid recipients and to send it to Federal Loan Servicers for the discharge of eligible student loans under the title IV, HEA programs. Internal reports also provide a secure vehicle for approved Department employees and Department contractor staff to access samples of individual records, for example as part of performing program reviews.

POLICIES AND PRACTICES FOR RETENTION AND DISPOSAL OF RECORDS:

The Department has submitted a retention and disposition schedule that covers the primary records contained in this system to NARA for review. The Department will treat these records as "permanent records," as defined in 36 CFR 1220.18, until such time as a final disposition is approved.

The EDMAPS system may also contain certain records that the Department considers, on a case-by-case basis and with the approval of the Agency Records Officer, to be covered by General Records Schedule 5.2, "Transitory and Intermediary Records."

ADMINISTRATIVE, TECHNICAL, AND PHYSICAL SAFEGUARDS:

All users of the system will have a unique user ID and password. In addition to the user ID and password, users must authenticate their Personal Identity Verification (PIV) card to access the system, from within either the Department's Network, the Department's Global Protect Virtual Private Network (VPN), or the Department's vendor's Cisco AnyConnect VPN. Users are required to change their password at least every 60 days in accordance with the Department's information technology standards.

All physical access to the information housed in the EDMAPS system locations is controlled and monitored by security personnel who check each individual entering the building for their employee or visitor badge.

The computer system employed by the Department offers a high degree of resistance to tampering and circumvention with firewalls, encryption, and password protection. This security system limits data access to Department and Department contractor staff on a "need-to-know" basis and controls individual users' ability to access and alter records within the system. All interactions by users of the system are recorded. Users of the EDMAPS system do not see PII, even when looking at individual records. EDMAPS tokenizes PII, meaning that PII is swapped out for non-sensitive random values. This does not prevent users of EDMAPS from joining tables containing the same PII data element, because tokenization ensures that the same non-sensitive value is swapped out in every table that has that particular data element, for example, SSN or date of birth.

In accordance with the Federal Information Security Management Act of 2002 (FISMA), as amended by the Federal Information Security Modernization Act of 2014, every Department system must receive a signed Authorization to Operate (ATO) from a designated Department official. The ATO process includes a rigorous assessment of security and privacy controls, a plan of action and milestones to remediate any identified deficiencies, and a continuous monitoring program.

FISMA controls implemented are comprised of a combination of management, operational, and technical controls, and include the following control families: access control, awareness and training, audit and accountability, security assessment and authorization, configuration management, contingency planning, identification and authentication, incident response, maintenance, media protection, physical and environmental protection, planning, personnel security, privacy, risk assessment, system and services acquisition, system and communications protection, system and information integrity, and program management.
