Abstract of Information Available

Waddell's Mill (8JA65)

Human remains representing, at least, one individual has been identified from the Waddell's Mill Site (8JA65). The 8,512 associated funerary objects include faunal bone, faunal shell, ceramic sherds, lithic flakes, glass shards, charred and uncharred plant remains, faunal coprolite, and unfired clay fragments. The site was excavated numerous times between 1952-1973. The site is located in Jackson County, Florida, approximately seven miles northwest of Marianna, Florida. The site is situated on a limestone hill of the Crystal River Formation. The Ancestor was found buried in a cave shelter (Cave 1) on the mound which sits along the spring-fed pond. The site dates to the Middle Woodland through the Mission Period (A.D. 200 to 17th Century) but is predominantly associated with the Fort Walton Period. The FLMNH undertook building-wide fumigation with Vikane (sulfuryl fluoride) several times since this collection has entered the museum. No other exposure to potentially hazardous substances is known to FLMNH.

Human remains representing, at least, seven individuals have been identified. There are no associated funerary objects. Human remains were uncovered as part of a construction project on the corner of Marine St. and Arsenal St. in St. Augustine, St. Johns County, Florida in June of 1973.
