# ORGANIZATION

## INTRODUCTION

This Directory shows the organizational structure of the Department of Agriculture.

The multiple activities of its bureaus and offices are explained briefly, and the locations of those activities within and outside the continental United States given.

Only supervisory personnel are listed at each location except for research workers engaged in special projects which makes the latter listing more extensive.

## OFFICE OF THE SECRETARY

The Department of Agriculture performs many varied functions relating to research, education, conservation, marketing, regulatory work, and agricultural adjustment.

When the Department was established it was directed by law to acquire and diffuse information on agricultural subjects in the most general and comprehensive sense.

Research is conducted in the following fields:

1. Agricultural and industrial chemistry
2. The industrial uses of farm products
3. Entomology
4. Soils
5. Agricultural engineering
6. Agricultural economics
7. Marketing
8. Crop and livestock production
9. Production and manufacture of dairy products
10. Human nutrition
11. Home economics
12. Conservation

Results of the research are made available for practical farm application through extension and experimental station work in cooperation with the 48 states.

The Department provides:

1. Crop reports
2. Commodity standards
3. Federal meat inspection service
4. Other marketing services

Attempts are made to eradicate and control plant and animal diseases and pests. More than 50 regulatory laws designed to protect the farmer and the consuming public are administered by the Department.

Efficient use of soils and forests is promoted. Rural rehabilita-

tion and a fair price and stable market are provided for and guaranteed by the Department through commodity loans and marketing quotas.

Agricultural credit and assisting tenants to become farm owners is fostered. The Department also facilitates the introduction of electric service to persons in rural areas.

The Secretary of Agriculture supervises and directs the work of the Department. He is assisted by an Under Secretary and an Assistant Secretary. His staff officers include:

Chief of the Bureau of Agricultural Economics
Director of Finance
Director of Personnel
Director of Foreign Agricultural Relations
Chief Hearing Examiner
Director of Information
Chief of the Office of Plant and Operations
The Solicitor
Departmental Librarian

The Department contains the following major units, each of which is supervised by a chief who reports directly to the Secretary:

1. Agricultural Research Administration
2. Commodity Credit Corporation
3. Commodity Exchange Authority
4. Extension Service
5. Farm Credit Administration
6. Farmers Home Administration
7. Federal Crop Insurance Corporation
8. Forest Service
9. Production and Marketing Administration
10. Rural Electrification Administration
11. Soil Conservation Service

# BUREAU OF AGRICULTURAL ECONOMICS

The Bureau of Agricultural Economics is the primary agency in the Department for collecting and disseminating agricultural statistics, for economic research, and for the dissemination of the results thereof.

The Bureau acquires, analyzes, interprets, and diffuses useful economic information relative to agricultural production and distribution, land utilization and conservation in their broadest aspects (including farm management and practice) utilization of farm and food products, purchasing of farm supplies, farm population and rural life, farm labor, farm finance, insurance and taxation, adjustments in production to probable demand for the different farm and food products, land ownership and values, costs, prices, and income in their relation to agriculture, including causes for their variations and trends. It also collects, compiles, abstracts, analyzes, summarizes, interprets and publishes economic and statistical data relating to agriculture and food (including crop and livestock estimates), acreage, yield, grades, staples of cotton, stocks, and value of farm crops and numbers, grades and value of livestock and livestock products on farms. The Bureau, as a service or staff agency, aids the Secretary's Office and other agencies in analyzing proposed programs or activities and oversees statistical matters and economic research throughout the Department.

## OFFICE OF BUDGET AND FINANCE

The Office of Budget and Finance as a staff agency carries out departmental functions relating to over-all administration of the

budgetary, procurement, and fiscal affairs of the Department. It provides leadership and coordination of these activities throughout the Department, including the acquisition and distribution of funds; accounting; auditing; budgetary and financial reporting; budget, fiscal, and procurement organization and management; purchasing, warehousing, utilization, and disposal of administrative and operating supplies and equipment; and related activities.

The Office also formulates and promulgates departmental policies and procedures relating to such functions, including the review and evaluation of program and legislative proposals for budgetary, financial, and related implications, and, in cooperation with staff and program agencies, obtains improvements in the management and operation of work programs administered by the Department.

The Office acts as Department liaison on all such matters with the Congressional Committees on Appropriations, Bureau of the Budget, General Services Administration, General Accounting Office, Treasury Department, and others.

It coordinates in the field the activities of Area Agricultural Equipment Committees to insure maximum effective utilization of administrative supplies and equipment owned and procured by the Department.

## OFFICE OF FOREIGN AGRICULTURAL RELATIONS

The Office of Foreign Agricultural Relations assembles, compiles, analyzes, interprets and publishes information affecting foreign agriculture and United States imports and exports of farm commodities.

This work involves constant statistical reports on planted acre-

ages, weather conditions, crop yields, livestock numbers, crop and livestock production, price trends, stocks, agricultural exports and imports, consumer purchasing power, and supplies of seed, fertilizers, farm equipment, and farm labor. It also necessitates reports regarding other factors influencing the immediate and future supply of, and demand for farm products in individual countries, especially the demand abroad for agricultural products exported by, and imported into, the United States.

The Office prepares statements on the foreign situation for use of Departmental committees concerned with various agricultural commodities, and furnishes representation on interdepartmental commodity committees, and on international working groups studying individual commodities.

The fulfillment of the Offices functional responsibilities is made possible by a heavy volume of information gained from many sources, the most important of which are the official reports of the United States Foreign Service and other United States representatives abroad.

The Office conducts, with Research and Marketing Act funds, extensive marketing surveys on individual commodities in certain parts of the world. Its commodity specialists maintain close contact with farm and trade organizations interested in the exportation and importation of individual agricultural commodities. They participate, upon invitation, in meetings of such organizations and supply those organizations as well as individuals concerned with export and import agricultural trade, with the most recent foreign information.

The Office keeps in constant touch with developments in the agricultural policies of foreign countries, and the relation of United States policies to international trade. It maintains liaison with the Department of State for the coordination of the United States Government's agricultural activities abroad. It is further active in disseminating information and statistics on international trade, and agricultural and international trade policies on a country-and-region basis. In the realm of agricultural policy, the Office is particularly concerned with (a) the many commercial agreements negotiated by foreign countries for the purpose of channeling trade to the mutual advantage of the countries involved, and (b) with problems resulting from the shortage of dollar exchange in many countries.

Information collected on a geographical basis regarding agricultural production, trade, food requirements, and general economic conditions, is useful in preparing the Office's world food situation reports which have served as a basis in allocating food supplies to needy areas. Such information likewise serves to answer inquiries from the general public, Congress and government agencies and organizations, such as the Economic Cooperation Administration, the Interdepartmental Trade Agreements Organization, the State Department, and National Defense agencies.

The Office is engaged in continued study of the agricultural patterns of the various countries of the world, including specialized research on types of production and marketing, consumer

needs, government policies, tariff trends and related subjects.

Under broadened Congressional authority and in conformity with the President's Point IV program, the Office of Foreign Agricultural Relations plans and directs, in cooperation with the Department of State and the governments of foreign countries, programs to raise living levels in underdeveloped areas of the world and to stimulate the foreign production of crops needed to promote the economic welfare of the United States.

These programs include the cooperative management of agricultural stations, the operation of agricultural extension services and the conduct of research and investigation projects. Emphasis is given to the training of personnel and improvement of agricultural institutions of collaborating countries as means of obtaining increased production of crops of critical or strategic importance or otherwise complementary to United States agriculture. Increase of local food supplies likewise is stressed.

## OFFICE OF HEARING EXAMINERS

The Office of Hearing Examiners was established within the Department of Agriculture by the Secretary of Agriculture on December 9, 1946, to meet the requirements of the Administrative Procedure Act which provided that, after December 11, 1946, employees engaged in investigating or prosecuting functions should not participate in the adjudication of cases required by statute to be determined after a hearing. The Act also provided that after June 11, 1947, statutory administrative hearings, with certain exceptions, should be conducted by hearing examiners appointed pursuant to terms of the Act and subject to the civil service laws.

The hearing examiners hold hearings, make reports, recommend decisions and perform such related duties as may be required by the Administrative Procedure Act and the statutory provisions, regulations, and rules of practice applicable to the various matters under their jurisdiction. Such matters include proceedings arising under the Agricultural Marketing Agreement Act of 1937, rate making and disciplinary proceedings under the Packers and Stockyards Act and disciplinary proceedings under the Commodity Exchange Act, the Perishable Agricultural Commodities Act and the Federal Seed Act.

## OFFICE OF INFORMATION

The Office of Information as a staff agency determines over-all and basic operating policies for information work. This includes advisory assistance to the Secretary on all informational matters.

The Office directs and co-ordinates information work with the Department's over-all basic planning, research and action programs, including planning, formulating and coordinating policies for bureaus, administrations and agency information programs and operations.

The Office serves as a release point for information released by radio, television, press reports, special reports and publications, and for final preparation, procurement and distribution of publications, including final responsibility for determination of printing and processing policies.

The Office prepares and distributes exhibits and motion pictures. It services requests for publications and general information from the public, Members of Congress, other Government agencies and the Department agencies.

## LIBRARY

The Department Library contains more than 750,000 volumes on agriculture and the related sciences, technology and economics. The Library currently receives more than 15,000 periodical and serial publications.

The dictionary card catalog of the Library, containing more than a million cards, is a record of the book resources of the whole Department. It is supplemented by several extensive indexes. Together, these form the most comprehensive bibliography of agriculture and the related sciences available in the United States. A *Bibliography of Agriculture* in printed form is issued monthly by the Library. Miscellaneous bibliographs on special subjects are issued from time to time. Photoprints and microfilms of library materials are available at cost.

## OFFICE OF PERSONNEL

Office of Personnel directs all phases of personnel management to aid officials *in making the most effective use* of the Department's human resources.

The Office integrates the personnel program with the research, technical, regulatory, inspection, administrative and other programs of the Department. It develops and promulgates personnel policies and establishes and directs the maintenance of standards for organization, position classification, hours of duty, salary administration, recruitment, examinations, placement, transfer, promotion, efficiency, honorary recognition, employee relations, safety, health and investigations. The Office also acts as liaison office on matters of personnel administration with all governmental or private agencies concerned with the work of the Department. Bureau personnel offices are responsible for the personnel programs within the various bureaus.

Activities of the Office are in the nature of auxiliary service to directive and staff officials of the operating bureaus carrying on national programs. Personnel offices of the bureaus look to the Office of Personnel for guidance in providing services to their employees and in administering the regulations and procedures.

Control of personnel administration is vested in the Secretary, who in turn delegates to the Office of Personnel much of the responsibility for this phase of management. Increasingly, the role of the Office of Personnel has become more that of policy and basic procedures and service agency and less that of an agency directly handling personnel actions. It is the Office of Personnel policy to delegate generously but to maintain necessary central controls to see that the policy of the Secretary is properly followed.

The Office of Personnel encourages the development of strong bureau personnel offices. It encourages uniformity in the Department's personnel work to foster quality and efficiency, and the greatest measure of helpful service and just treatment for the individual employee.

## OFFICE OF THE SOLICITOR

The Solicitor is the chief law officer of the Department. He is assisted by an Associate Solicitor on Litigation and by five Associate Solicitors in charge of the legal work arising under the various programs administered in the Department, together with their staffs, consisting of divisions under the supervision of chiefs. The regional attorneys on the staff of the Solicitor act as legal advisers to the field officers of the Department.

The Solicitor represents the Secretary of Agriculture and the Administrator of the Farmers Home Administration in civil actions arising under the Farmers Home Administration Act of 1946 and also represents the Secretary in proceedings before the Interstate Commerce Commission involving freight rates on farm commodities and in appeals from the decisions of the Commission to the courts. By special assignment of the Attorney General, the Associate Solicitor on Litigation represents the Department in certain classes of cases before the United States Circuit Courts of Appeals. All other civil litigation affecting the Department is handled by the Department of Justice, with the Office of the Solicitor assisting in the preparation and trial of such cases. Criminal cases arising under the programs of the Department are reviewed for the purpose of referring them to the Department of Justice. The Solicitor also represents the Department in administrative proceedings for the promulgation of rules having the force and effect of law and in quasi-judicial hearings held in connection with the administration of various programs.

The Solicitor issues both formal and informal opinions on legal questions arising in the administration of the Department's programs and provides a variety of other legal services, such as the preparation and review of administrative rules and regulations applicable to the public, the drafting of proposed legislation, the preparation and interpretation of contracts, mortgages, leases, deeds, and similar documents, the prosecution of patent applications by employees of the Department, the examination of titles to lands to be purchased by the Department or accepted as security for loans, and the disposition of claims by and against the United States arising out of the Department's activities.

The Solicitor is also general counsel for the Commodity Credit Corporation and the Federal Crop Insurance Corporation, agencies within the Department.

## AGRICULTURAL RESEARCH ADMINISTRATION

### OFFICE OF THE ADMINISTRATOR

The Office of the Administrator is responsible for over-all direction and supervision of the Administration, which comprises the Bureaus of Agricultural and Industrial Chemistry; Animal Industry; Dairy Industry; Entomology and Plant Quarantine; Human Nutrition and Home Economics; Plant Industry, Soils, and Agricultural Engineering; and the Office of Experiment Stations. The Office of the Administrator also is responsible for administration of research on agricultural problems in Alaska; and general supervision of the Agricultural Research Center, Beltsville, Md.

The Office of the Administrator plans, develops, coordinates and directs the scientific research program of the Agricultural Research Administration and coordinates all agricultural research activities (other than economic) of the Department including administration of the Research and Marketing Act of 1946; and determines research objectives to conform with the changing requirements of the national agricultural situation. The research programs of the Administration relate to: quality improvement; new and improved production and distribution methods; new and extended uses and markets for agricultural commodities and by-products; nutrition and home economics; conservation, development and use of land and water resources; and the control of plant and animal diseases and parasites.

## BUREAU OF AGRICULTURAL AND INDUSTRIAL CHEMISTRY

The Bureau of Agricultural and Industrial Chemistry is a research organization engaged in investigations and experiments in the fields of chemistry, chemical engineering, physics, and other physical sciences relating to agricultural products and to the development of new and wider industrial and food uses for agricultural commodities.

Under the broad subject of the application of chemistry to agriculture, the Bureau is engaged in investigations concerning the composition, properties, and technology (processing, utilization, and preservation) of agricultural products and byproducts; the biological, chemical, physical, microscopical and technological investigation of foods, feeds, drugs, plant and animal products, and substances that may be associated with them or used in their manufacture, including studies of their physiological effects on animals; experiments on the preparation and utilization of agricultural and associated raw materials for industrial purposes; and development of improved processes and equipment for the production and utilization of rosin and turpentine.

A major portion of the investigations of the Bureau is carried on in four regional research laboratories. These laboratories conduct investigations to develop new and wider industrial uses for agricultural commodities. Studies are being made on the principal crops in each of the four major agricultural producing areas of the country. Investigations at the Northern Laboratory, located in Peoria, Ill., cover studies on corn, wheat, and other cereal crops, molasses, soybeans and other oil-seed crops, and agricultural residues, such as straws and stalks; at the Southern Laboratory, New Orleans, La., studies on cotton, sweetpotatoes, peanuts, wool fabrics, tung nuts, fruits, vegetables, sugarcane, naval stores and rice; at the Eastern Laboratory, Wyndmoor, near Philadelphia, Pa., studies on tobacco, fruit, potatoes, and other vegetables, milk products, hides and skins, tanning materials, animal fats and oils, wool grease, maple syrup and honey; and at the Western Laboratory, Albany, near San Francisco, Calif., studies on fruits, vegetables,

wheat, alfalfa, poultry products and byproducts, rice, wool, sugar beets and domestic rubber plants.

## BUREAU OF ANIMAL INDUSTRY

The Bureau of Animal Industry conducts research and administers programs primarily concerned with the protection and

the development of the livestock industry of the United States.

The Bureau conducts scientific investigations of causes, prevention, and treatment of diseases and parasites of domestic animals, investigates the existence of such maladies, and directs or aids in their control or eradication; carries on experiments in breeding and feeding livestock, poultry, and fur-bearing animals raised in captivity and studies methods of improving the quality and usefulness of their products.

The Bureau administers Federal acts regarding animal quarantine, diseased animal transportation, humane handling of livestock while in the course of interstate transportation, the production and the distribution of veterinary biological products, meat inspection and certification of certain canned animal foods.

## BUREAU OF DAIRY INDUSTRY

The Bureau of Dairy Industry conducts research to improve the economic welfare of the dairy industry. Its research deals with problems of breeding, feeding, and management of dairy cattle to improve their producing efficiency; with the nutritional requirements of dairy cattle for maintaining optimum levels of usefulness and the value of feeds, feed constituents, and feeding regimes as sources of nutrients; the nutritional value of milk and the effect of nutrition of the cow upon the milk produced, and the physiological factors affecting the general economic usefulness of dairy cattle; with the improvement of the quality of dairy products and methods of manufacturing new dairy products; with

problems of utilizing the byproducts of dairy manufacture more efficiently including methods of incorporating byproducts or their constituents in foods for human use.

The Bureau cooperates with State dairy extension services in the establishment of improved dairy practices through the operation of dairy herd-improvement associations. It maintains and analyzes production records of all cows in dairy herd-improvement association herds for the purpose of identifying sires and determining their breeding value. The Bureau also supervises the sanitary inspection of process butter factories.

## BUREAU OF ENTOMOLOGY AND PLANT QUARANTINE

This Bureau carries on investigations on insects, gives advice on how to control or use them, cooperates with State and local agencies to control and prevent the spread of injurious insects and plant diseases, advises the Secretary of Agriculture on matters relating to plant quarantines, and is responsible for the enforcement of Federal plant quarantines and regulatory orders to prevent the introduction into or spread within the United States of injurious insect pests and plant diseases, and diseases dangerous to the adult honeybee.

The research it does on insects includes studies on their classification, anatomy, physiology, habits, and responses under normal and artificial conditions. The investigations are conducted to develop information on how insects which are injurious to agriculture, forestry, animals, or annoy or injure man or destroy his possessions may be eliminated or controlled. This involves research on chemicals or other substances that may be used to prevent, destroy, attract, repel, or mitigate the severity of attacks of insects which infest vegetation, attack or annoy animals, or may be present in households or any environment whatsoever, including the study of problems relating to the composition, action, and application of such materials and the development of methods for their manufacture and use. Investigations are made on diseases and natural enemies of insects to determine ways of utilizing those which may aid in the control of injurious insect pests. Studies are made on the culture and use of honeybees and of beekeeping practices.

Under general and special authorization and in cooperation with State and local agencies, the Bureau carries on operations to eradicate, suppress, or control incipient outbreaks of insect pests and plant diseases, including those which may have gained a more or less limited foothold within the United States. It cooperates with State and local agencies in combating insects or plant diseases which occur in emergency outbreaks which unless controlled would cause extreme losses over wide areas within their normal distribution. It cooperates with agencies of the Federal Government responsible for the management of lands under control of the United States in operations to combat insect pests and plant diseases.

To prevent the entry or spread within the United States of injurious insects and plant diseases it enforces quarantines and restrictive orders, issued under authority provided in various acts of Congress, which prohibit or regulate the importation or inter-

state movement of injurious insects and of plants and plant products that may introduce or spread insect pests or plant diseases new to or not widely prevalent within the United States. To carry out this work it regulates and inspects the entry into the United States of railway cars and other vehicles, freight, express, and baggage from Mexico, and when necessary cleans or disinfects them. In compliance with plant-quarantine regulations it inspects at ports of entry plants and plant products that may be brought to the United States.

The Bureau inspects plants and plant products offered for export and certifies to shippers and interested parties such products in accordance with the sanitary requirements of the country to which they may be exported.

## BUREAU OF NUTRITION AND HOME ECONOMICS

The Bureau of Human Nutrition and Home Economics is a research organization which conducts both laboratory and field investigations. It also coordinates the nutrition services available to the public through programs of Federal, state and other agencies. Family economics studies are conducted from the Bureau's Washington headquarters. Laboratory work is performed at the Agricultural Research Center, Beltsville, Maryland, and at 24 locations in cooperation with research institutions in the states. Results of all the Bureau's research are disseminated through technical and popular bulletins and articles, press releases, radio talks, and motion and other picture material. The program includes studies on:—

1. **Food and Nutrition:** To determine the nutritive contributions of different foods to the diet, the food and nutritional requirements of people, and how these facts can be applied by families in differing circumstances to the buying of food, the preparation of healthful meals, and the preservation and care of food in the home. Typical studies deal with the food-energy requirements of children; the digestibility, physiological energy-value and vitamin A value of selected foods; and bacteriological and other technical problems of processing and packaging to improve techniques of home food preservation through freezing and canning.
2. **Family Economics:** To investigate problems of household buying, and the adequacy and relative economy of the food, clothing and other goods and services that are consumed by various population groups, particularly the major items of household expenditure which serve as indicators of farm family living standards. Special study is given to expenditures for family living as affected by income, family size, environment and other factors. The nutrient content of the national food supplies is appraised periodically; available data are compiled and evaluated on the composition of foods as marketed and as eaten; and food budgets are developed for institutional groups and for families.

3. **Textiles and Clothing:** To assist homemakers with the selection, use and care of family clothing and to help producers in the development of fibers, fabrics and garments for specific consumer uses.
4. **Housing and Household Equipment:** To obtain information as a basis for the improvement of the functional design of rural houses for comfortable living and efficient work. The operating characteristics and performance in use of household equipment are studied in order to assist families with the selection, care and use of household equipment.

## BUREAU OF PLANT INDUSTRY, SOILS, AND AGRICULTURAL ENGINEERING

The Bureau of Plant Industry, Soils, and Agricultural Engineering does research on crop, soil, machinery, storage, transportation, and housing problems of general and specialized farming, forestry, and gardening. Among the problems studied are those of weather, disease, weeds, fertilization, mechanical operations of insect control, and other environmental factors affecting the growing and storing of farm products and the influence of environment on the health and production of farm animals as well as housing of the farm family.

Headquarters for the Bureau are at the Plant Industry Station, Beltsville, Md. Most of its work is conducted in cooperation with the State agricultural experiment stations. As indicated in the

Bureau name, the investigations are along three main lines as follows:

I. Studies in the plant sciences: Research with plants is concerned chiefly with reducing the hazards of production and improving the yield and quality of all crops and lowering costs and marketing. The studies may be divided as follows:

1. Introduction and testing of promising seeds and plants from foreign countries for possible domestic use and for genetic improvement of crops now grown.

2. Breeding of plants that will produce crops of high yield, good quality, and resistance to disease, insects, heat and cold, and drought. This involves fundamental research in the laws of inheritance looking toward sound procedures.

3. Studying the pathology, ecology, physiology, morphology, and cytology of plants for an adequate understanding of disease control and the relations between environment and cultivation, and yield and quality. Efforts to control diseases involve studies of bacteria, fungi, and nematodes, their life histories, and a knowledge of how they are spread to new territory. With this information it is often possible to work out some practical control measure such as seed treatment, spraying, dusting, or soil fumigation. Through the work of the Crop Plant Disease Forecasting project current reports on disease occurrence are compiled into regularly issued warning letters.

One phase of the Bureau's work that has recently received considerable emphasis is the study of plant growth-regulating chemicals, which have a variety of uses, including weed control, treatment of cuttings to stimulate root formation, prevention of preharvest drop of some fruits, blossom thinning, hastening of ripening, increase of flavor and nutritional value, and others. One result of these studies most familiar to the public is the use of such chemicals as 2.4-D for weed control, now practiced on a number of crops and on millions of acres.

The basic discovery of the effects of length of day on the blossoming and fruiting of plants has resulted in a long series of studies on the effects of this factor on various plants and their propagation, adaptation, and production.

II. Research on Soils and Their Management: Soil investigations center around the relations between the soil and the crops it produces. Research in this field seeks to develop a better understanding of the various soils of the country and to find ways to increase their fertility and productivity. An important phase of this work is the soil survey. This involves classification of the soils of the entire country by counties into many groups that include more than 8,000 types. The distribution of individual soil types is shown on maps in sufficient detail and accuracy for predicting the production possibilities of each field and farm. This job of classifying all of the agricultural soils of the country, done in cooperation with State Agricultural Experiment Stations, is now in its fiftieth year and is about half completed. It provides farmers with information on the physical and chemical character-

istics of their soils, which fields are best adapted to certain crops, and what fertilizers and other management practices to use.

Other work on soils includes studies of their basic physical and chemical properties; research on the microscopic plant and animal life in the soil and its effect on crops; and methods of cultivation, irrigation, and crop rotation. The studies of soils-water-plant relationships that may affect management of different soils or irrigation of crops have as their objective the development of practices for more efficient production while at the same time conserving the nation's soil resources.

The soil investigations also cover the development of new types of fertilizer or other soil amendments or the formulations of fertilizer, the testing of these for use on various crops, their application or placement in the soil for efficient returns to the farmer, the utilization of applied plant food materials by plants as shown in studies with radioactive isotopes, and similar problems in fertilizer technology.

III. Investigations in Agricultural Engineering: The engineering work of the Bureau has to do with the efficient use of power, labor, machines, and materials in farming. Studies are directed toward improving farm machinery and equipment for seed-bed preparation, planting, fertilizer placement, cultivation, and harvesting of crops, and their protection from insects or other plant pests, diseases, and competition from weeds. The investigations also involve various methods of drying or conditioning hay and grains, cotton ginning and packing, fiber flax processing, hulling of seeds and nuts, and processing of other crops or farm products on the farm or in the nearby rural communities for efficient marketing or improvement in quality, and their conditioning or storage for transportation, marketing, or use at the convenience of the grower.

In addition to the use of mechanical power, the Bureau's studies involve income-producing applications of electrical energy in farming, both in the form of power and as radiations that may affect the growth and production of plants or the health and comfort of farm animals.

In the field of farm structures, studies are directed toward improving the design of different types of farm storages and service buildings for efficient use and operations, and for strength as well as economy in materials and construction. Studies in animal housing involve the environmental factors that may affect the health and production of animals. Farm housing research is directed toward the design and planning of more livable farm homes. The Bureau assists other Bureaus of the Department in the design and supervision of construction outside the District of Columbia and advises them in the purchase of engineering equipment.

The development of the National Arboretum was begun under the act of March 4, 1927 (Public No. 799, 69th Cong.), and funds for its operation are appropriated through the Bureau of Plant Industry, Soils, and Agricultural Engineering. Pursuant to authority contained in this act, the Secretary of Agriculture created the Advisory Council of the National Arboretum. The council

makes recommendations concerning the establishment and maintenance of the National Arboretum for purposes of research and regarding tree and plant life.

## OFFICE OF EXPERIMENT STATIONS

The Office of Experiment Stations administers the funds for research in agriculture and rural life made available to the experiment stations of the 48 States, Hawaii, Alaska, and Puerto Rico through annual congressional appropriations under the provisions of the Hatch, Adams, and Purnell Acts; Title I of the Bankhead-Jones Act of June 29, 1935; Section 9, Title I of the Research and Marketing Act; and the supplementary acts.

In administering these Federal grants the Office evaluates and approves new and revised research proposals, including the cooperative regional projects involving use of the regional research fund, reviews and approves annual programs and budget allotments, and examines, in the field, the work and expenditures. The general administrative direction and supervision of the Federal agricultural experiment station in Puerto Rico is a responsibility of the Office.

The Office participates in the planning and coordination of research among the experiment stations and between the stations and the Department through advisory relationships and supervisory activities. This includes the examination and approval of formal memoranda of understanding covering cooperative research and the collection and dissemination of information designed to aid the productiveness and soundness of agricultural research programs.

## AGRICULTURAL RESEARCH ADMINISTRATION

### AGRICULTURAL RESEARCH CENTER—OFFICE OF OPERATIONS

The Office of Operations provides for the general supervision of the entire plant and the development and operation of all common facilities required by the organizations of the Department engaged in fundamental agricultural research. These services include furnishing of electricity, water, heat, telephones, building maintenance, roads, mechanical shops, granary, guards, mail service, safety and health, and raising of feed crops for animals. The reservation comprises an area of approximately 12,000 acres on which scientific, research, and experimental activities are conducted by 10 bureaus of the Department and by several other governmental agencies.

## COMMODITY CREDIT CORPORATION

The Commodity Credit Corporation is an agency and instrumentality of the United States within the Department of Agriculture, subject to the general supervision and direction of the Secretary.

CCC was organized in 1933. From then until 1939, the Commodity Credit Corporation was managed and operated in close affiliation with the Reconstruction Finance Corporation. On July 1, 1939, CCC was transferred to the Department of Agriculture by the President's Reorganization Plan I. Approval of the Commodity Credit Corporation Charter Act on June 29, 1948, (Public Law 806, 80th Cong.), established CCC as an agency and instrumentality of the United States under a permanent Federal charter. The charter was amended in 1949.

The Corporation is for the purpose of stabilizing, supporting and protecting farm income and prices. It assists in the maintenance of balanced and adequate supplies of agricultural commodities, products thereof, foods, feeds, and fibers. CCC facilitates the orderly distribution of agricultural commodities.

The Corporation is authorized to use its general powers to (a) support the prices of agricultural commodities through loans, purchases, payments, and other operations; (b) make available materials and facilities required in connection with the production and marketing of agricultural commodities; (c) procure agricultural commodities for sale to other Government agencies, foreign governments, and domestic, foreign, or international relief or rehabilitation agencies, and to meet domestic requirements; (d) remove and dispose of or aid in the removal or disposition of surplus agricultural commoidities; (e) increase the domestic consumption of agricultural commodities by expanding or aiding in the expansion of domestic markets or by developing or aiding in the development of new or additional markets, marketing facilities, and uses for such commodities; (f) export or cause to be exported, or aid in the development of foreign markets for agricultural commodities; (g) carry out such other operations as the Congress may specify, authorize or provide for.

CCC activities are carried out through the facilities and personnel of the Production and Marketing Administration of the Department of Agriculture. Programs and policies are approved by the Board of Directors of CCC and the Secretary of Agriculture before being put into effect.

### BOARD OF DIRECTORS OF THE COMMODITY CREDIT CORPORATION

Management of the Corporation is vested in a Board of Directors subject to the general supervision and direction of the Secretary, who is an ex-officio director and serves as Chairman of the Board. The Board consists of six members (in addition to the

Secretary) appointed by the President by and with the advice and consent of the Senate.

Charles F. Brannan, *Sec'y. of Agriculture*
Knox T. Hutchinson, *Ass't. Sec'y of Agriculture*
Ralph S. Trigg, *Adm., PMA*
Frank K. Woolley, *Deputy Adm., PMA*
Elmer F. Kruse, *Ass't. Adm. for Commodity Operations*
Harold K. Hill, *Ass't. Adm. for Production*

ADVISORY BOARD

The Advisory Board consist of five members who are appointed and serve at the pleasure of the President. These members are selected for their broad agricultural and business experience. Not more than three of such members shall belong to the same political part. The Advisory Board meets at the call of the Secretary not less often than once each ninety days. It surveys the general policies in connection with the purchase, storage, and sale of commodities, and the operation of lending and price support programs and advises the Secretary with respect thereto.

Elwood M. Brooks
Seymour E. Harris
Albert K. Mitchell
Eugene W. Stetson
Sterry R. Waterman

OFFICERS OF THE CORPORATION

*The President*

The President is the Chief Executive Officer of the Corporation with general supervision and direction of all the officers of the Corporation and of the day-to-day conduct of its business.

Ralph S. Trigg, *Adm., PMA*

*The Vice President*

The Vice President of the Corporation assists the President in the performance of his duties and in the exercise of his powers to such extent as the President may prescribe, and performs such special duties and executes such powers as may be prescribed by the Secretary of Agriculture or the Board. Vice Presidents are:

Frank K. Woolley, *Deputy Adm., PMA*
Harold K. Hill, *Ass't. Adm. for Production, PMA*
Robert W. Herder, *Ass't. Adm. for Management, PMA*
Elmer F. Kruse, *Ass't. Adm. for Commodity Operations, PMA*
John I. Thompson, *Ass't. Adm. for Marketing, PMA*

*The Secretary*

The Secretary attends and keeps minutes of meetings of the Board; signs papers and instruments to which his signature is necessary; attests the authenticity of and affixes the seal of the Corporation upon any instrument requiring such action and performs other prescribed duties.

Lionel C. Holm, *Exec. Asst. to the Adm., PMA*

*The Controller*

The Controller has charge of all fiscal and accounting affairs of the Corporation, including all borrowings and financial arrangements, claims activities and the formulation of prices in accordance with established policies; and performs other prescribed duties.

K. A. Brasfield, *Dir., Fiscal Branch, PMA*

*The Treasurer*

The Treasurer has charge of the custody, safekeeping and disbursement of Corporation funds; and performs such other duties relating to the fiscal and accounting affairs of the Corporation as may be prescribed from time to time by the Controller.

James J. Somers, *Dep. Dir., Fiscal Branch, PMA*

*Chief Accountant*

The Chief Accountant has charge of the general books and accounts of the Corporation and the preparation of financial statements and reports; and performs other duties relating to fiscal and accounting affairs of the Corporation as may be prescribed from time to time by the Controller.

Robert H. Fuchs, *Dep. Dir., Fiscal Branch, PMA*

*Advisors to the Board of Directors*

The Solicitor, the Associate Solicitor, and the Director of Finance of the Department of Agriculture are advisors to the Board of Directors.

W. Carroll Hunter, *Gen. Counsel*
Edward M. Shulman, *Assoc. Gen. Counsel*
Ralph S. Roberts, *Fiscal Adviser*

*Contract Disputes Board*

The Contract Disputes Board is authorized to consider and determine appeals from findings of fact of an officer of the Corporation and appeals by claimants on all other contract claims against the Corporation where settlement and adjustment otherwise cannot be effected.

David J. Sullivan, *Sec'y.*

## COMMODITY EXCHANGE AUTHORITY

The Commodity Exchange Authority administers the Commodity Exchange Act, which provides for Federal regulation of all commodity exchanges which conduct futures trading in any of the following commodities: Wheat, cotton, rice, corn, oats, barley, rye, flaxseed, grain sorghums, millfeeds, butter, eggs, Irish potatoes, wool tops, fats and oils (including lard, tallow, cottonseed oil, peanut oil, soybean oil, and all other fats and oils), cottonseed meal, cottonseed, peanuts, soybeans, and soybean meal.

Its functions and procedures are designed to prevent commodity price manipulation and corners; prevent dissemination of false and misleading crop and market information to influence prices; protect hedgers and other users of the commodity futures markets against cheating, fraud, and manipulative practices; insure the benefits of membership privileges on contract markets to cooperative associations of producers; insure trust-fund treatment of margin moneys and equities of hedgers and other traders and prevent the misuse of such funds by brokers; and provide information to the public regarding trading operations on contract markets.

Reports are compiled and released daily showing volume of futures trading and amount of open futures contracts on the major markets; apparent and alleged violations of the statute are investigated and surveys made of trading on contract markets. The Commodity Exchange Authority cooperates with other governmental agencies in obtaining factual data and in providing information of interest and value in connection with supply and demand factors affecting commodity prices.

## EXTENSION SERVICE

The Extension Service carries on general educational work in agriculture and home economics. It aids in making available the results of research and investigation in these subjects to those who can put the information into practice. Extension Service coordinates the extension activities of the bureaus of the Department and of the State agricultural colleges and deals with emergency situations involving Department assistance to farmers. It represents the Department in the conduct of cooperative extension work in agriculture and home economics by the State agricultural colleges and the Department under the Smith-Lever, Capper-Ketcham, Bankhead-Jones, and supplementary acts of Congress. Each of the 48 States, and the Territories of Hawaii and Alaska and Puerto Rico, has a director of extension who represents jointly the Department and the State agricultural college in the administration of extension work.

In each State the extension organization consists of a State administrative and supervisory staff, with headquarters in most cases at the State agricultural college, and county agricultural agents, county home demonstration agents, and county club agents, who have their offices usually at the county seats. The distinguishing feature of extension teaching is the field demonstration, carried on through voluntary local leaders, although other educational methods are also used to teach the best farm and home practices to farm and rural individuals.

## FARM CREDIT ADMINISTRATION

The Farm Credit Administration provides a complete and coordinated credit system which at all times can make available long and short-term credit to farmers, stockmen, and farmer cooperatives in the United States. FCA was created by an executive order effective May 27, 1933, which provided for consolidating within one organization the powers and functions of all Federal agencies then dealing primarily with agricultural credit. In July 1939, the Farm Credit Administration became a part of the Department of Agriculture.

The United States is divided into twelve Farm Credit districts. In each of these districts are four major credit units located together in a headquarters city. A branch of the Baltimore office serves Puerto Rico. The major credit units are:

(1) A Federal land bank which makes long-term mortgage loans through local cooperatives known as National Farm Loan Associations. Approximately 1225 of these Associations serve all parts of the nation and also Puerto Rico. The 12 Federal land banks as well as the National Farm Loan Associations are now wholly owned by farmer members.

(2) A Production Credit Corporation that supervises and partially capitalizes local cooperatives known as Production Credit Associations which make operating loans to farmers and stockmen. Approximately 500 Production Credit Associations are located at convenient points. A total of 138 of these Associations have repaid all the capital stock held on behalf of the Government by their respective Production Credit Corporations. These 138 Associations are now wholly owned by members.

(3) A district Bank for Cooperatives that makes loans direct to farmer cooperatives.

(4) A Federal Intermediate Credit Bank that discounts short-term agricultural loans for local financing institutions such as production credit associations, agricultural credit corporations and commercial banks and makes loans to such institutions on the security of such paper. It extends credit also to the banks for cooperatives and, to a limited extent, to farmers' cooperative associations.

A Central Bank for Cooperatives located in Washington, D. C. makes loans to large regional or national cooperatives and assists district banks in handling large loans.

A Cooperative Research and Service Division of the Farm Credit Administration conducts research studies relating to problems of marketing, purchasing, and business service cooperatives. It disseminates information gathered in such projects, confers with cooperative officials, and studies the problems of individual associations and makes recommendations as the need arises.

The office of the Farm Credit Administration at Washington, D. C. supervises and coordinates activities and makes examinations of all the institutions comprising the Farm Credit System. The Central Office also supervises the liquidation of the loans of the Federal Farm Mortgage Corporation through the facilities of the Federal land banks, loans made from the Agricultural Marketing Act revolving fund, and the Joint Stock Land Banks.

## FARMERS HOME ADMINISTRATION

The Farmers Home Administration offers credit services to farm families who are unable to borrow from other sources on reasonable rates and terms. War veterans are given preference over other applicants.

Loans are made for operating purposes, for buying family-type farms or enlarging or developing uneconomic farms into family-type units, for the construction or repair of homes and farm buildings, and, in the 17 western states, for water facilities. Through its insured mortgage program, the agency also guarantees farm purchase, enlargement and development loans advanced by private lenders.

These services were authorized by the Farmers Home Administration Act of 1946, the Bankhead-Jones Farm Tenant Act of 1937, the Housing Act of 1949, and the Water Facilities Act of 1937.

All loans are made through the agency's local offices, after approval of applicants' eligibility by the Farmers Home Administration committee for the particular county. Each county committee is made up of three local persons, at least two of whom are farmers.

Operating credit is advanced for periods of one to five years, at 5 percent interest, and in most cases is used to finance necessary adjustments in families' farming operations. The borrowers receive individual assistance in making and carrying out individual farm-and-home plans designed to make best use of all their resources, to increase their production and income, and to conserve and build up the soil.

In the farm-ownership program, both the direct and the insured real estate loans are made for 40-year periods, with the provision that borrowers obtain refinancing from private or cooperative credit sources when they attain the necessary equity in their farms. The families receive individual guidance in developing sound, profitable farming operations.

The farm housing loans, first made in 1949, are repayable over periods up to 33 years, at 4 percent interest. Loans for water facilities, at 3 percent interest, are made to both individuals and groups of farmers in the arid and semi-arid areas of the west, and may extend up to 20 years but not longer that the usual life of the facility.

State Directors in 40 State Offices, some serving more than one state, are administratively in charge of the Farmers Home Administration program in their respective units. The State Director is responsible to the Administrator, and has the assistance of a State Farmers Home Administration Advisory committee of 9 members.

The Farmers Home Administration supervisors in charge of the local offices receive applications, make loans, assist borrowers with planning and carrying out farm-and-home plans, receive repayments, and handle other phases of local program administration.

## FEDERAL CROP INSURANCE CORPORATION

The Federal Crop Insurance Corporation—created within the Department of Agriculture in 1938—develops and operates crop insurance programs offering farmers protection of their crop investment against loss from causes beyond their control, such as weather, insect infestation, and plant diseases. The program operates on a business basis, with farmers paying premiums for the protection at rates which are expected to result in premiums balancing with indemnities over a period of years.

Under present legislation crop investment protection is being offered on wheat, cotton, corn, flax, tobacco, and dry edible beans on a commodity basis. Investment in several crops is being insured in some counties under a multiple-crop protection plan. The number of counties in which each program may operate is limited by legislation which now authorizes the Corporation to expand its operations in each of 3 years—1950, 1951, and 1952—by half the number of counties in which operations were authorized in 1948 for each insurance program. Trial programs may be operated on additional commodities when sufficient actuarial data are available.

## FOREST SERVICE

The Forest Service is charged with the responsibility for promoting the conservation and best use of the Nation's forest lands, aggregating approximately a third of the total land area of the United States.

Broadly, responsibilities of the Forest Service as designated by Congress are (1) to protect, develop, and administer in the public interest the national-forest system and its resources; (2) to cooperate with the States and private owners in programs for protection and proper management of forest lands; (3) to conduct research in problems involving the protection, management and use of forest resources; (4) to make research and administrative findings and results available to individuals, industries, and public and private agencies generally.

*National forests.*—The Service administers 152 national forests, comprising over 180,000,000 acres in 40 States and Alaska and Puerto Rico. It improves them, protects them from fire, insects, and disease, and manages their resources for orderly and continuous service and for the maintenance of stable economic conditions in national forest communities. Technical methods of forestry are applied to the growing and harvesting of timber. Livestock grazing is scientifically regulated to obtain range conservation along with use of the annual growth of forage. Watersheds are managed for

the regulation of streamflow, reduction of flood danger and soil erosion, and the protection of sources of water for power, irrigation, navigation, and municipal and domestic supply. Provision is made for popular outdoor recreation. Scientific management is applied to the development and maintenance of wildlife resources.

*Cooperation in forestry.*—States and private owners of forest lands receive cooperation from the Forest Service in the application of sound forest management practices, in the development and maintenance of organized protection of forest lands against fire, and in the distribution of planting stock to farmers for windbreaks, shelterbelts, and farm woodlands. The Service cooperates with States to stimulate development, proper administration, and management of State forests, and with communities, counties, and organizations in the development and management of community forests. It also administers the agricultural conservation program as applied to the naval stores industry.

*Forest research.*—In 12 forest and range experiment stations and in the Forest Products Laboratory at Madison, Wis., the Forest Service conducts investigations in the entire field of forestry and wild land management, including the growth, protection, and harvesting of timber, management of range lands, efficient and economical utilization of forest products, and research in forest economics and taxation and forest influences. It is conducting a forest survey of the United States. This is a study of the Nation's present and potential forest resources.

## PRODUCTION AND MARKETING ADMINISTRATION

The Production and Marketing Administration was created by Secretary's Memorandum 1118 of August 18, 1945 under authority of section 22 of title 5 of the United States code Executive Order 9577 issued June 29, 1945 and related Executive Orders.

The Production and Marketing Administration, created in 1945, administers programs relating to: (1) agricultural conservation; (2) production adjustments (including production goals, acreage allotments and farm marketing quotas); (3) price support and stabilization through loans, purchase agreements, purchases and other means; (4) stabilization of sugar production and marketing; (5) international commodity agreements; (6) surplus removal through direct purchases and distribution operations and encouragement of exports and domestic diversions to new uses and markets; (7) procurement for supply and other purposes; (8) foreign purchases; (9) school lunch; (10) marketing agreements and orders; (11) marketing research and standardization; (12) marketing services; (13) marketing regulation and (14) other production and marketing activities, including assistance to and collaboration with other Departmental Federal and State agencies in administering federal crop insurance, water resources and flood control activities, eradication of food and mouth disease in Mexico, and foreign economic assistance operations.

The Agricultural Conservation Program carried on under authority of the Soil Conservation and Domestic Allotment Act of 1936 and the Agricultural Adjustment Act of 1938, is designed to preserve and improve soil fertility, promote the economic use and conservation of land, diminish the exploitation and wasteful and unscientific use of national soil resources and protect rivers and harbors against the results of soil erosion in aid of maintaining the navigability of waters and water courses and in aid of flood control.

This is done by providing assistance to agricultural producers through payments or grants of other aid for the treatment or use of their land so as to restore the soil, conserve the soil or prevent erosion and in semi-arid or arid sections conserve water, use water more beneficially on individual farms, apply measures to prevent run off, build check dams and ponds and provide facilities for applying water to the land. Approved practices include application of lime and phosphate materials to promote growth of soil-conserving crops; planting of green manure and cover crops to replace humus; construction of terraces, reservoirs, and dams to prevent erosion and conserve water; farming on the contour and strip cropping to prevent erosion; and the seeding or reseeding of pastures and range land to provide better erosion-preventing cover. All these prac-

tices aid in increasing infiltration of water, thus recharging ground water supplies and stabilizing stream flow.

Assistance to any one person may not exceed $2,500. The appropriation for the 1950 Agricultural Conservation Program is $285,000,000.

The program is administered in each county by a county PMA Committee and in each community by a community committee. The county and community committees are farmers residing in the county or community and are elected by their fellow farmers each year.

### PRODUCTION ADJUSTMENT PROGRAMS

The Agricultural Adjustment Act of 1938 as amended, authorizes the adjustment of acreage, through acreage allotments and adjustment of marketing of basic commodities and long-staple cotton through marketing quotas, whenever supplies are out of line with demand. Acreage allotments become effective without approval of producers but marketing quotas, when proclaimed, continue in effect only if approved by two-thirds of the producers voting in a referendum. When marketing quotas are in effect, excess marketing of commodities under quotas are subject to penalties. Compliance with acreage allotments and marketing quotas has been made a condition of eligibility for price support under provisions of the Agricultural Act of 1949. PMA County Committees administer allotments and quotas locally.

### PRICE SUPPORT AND STABILIZATION PROGRAMS

As directed and authorized by the Agricultural Act of 1949 and the Commodity Credit Corporation Charter Act of 1948, as amended, PMA carries out the price support programs and operations of the Commodity Credit Corporation. Under these programs price minimum or "floors" are established for a number of commodities. Support is achieved through loans, purchases, or agreements to purchase—or in the case of some commodities, through a combination of these methods. Commodities acquired under price support operations are disposed of through various means such as sales to foreign governments, commercial outlets and others. Price support is mandatory for corn, cotton, wheat, tobacco, rice, peanuts, wool, mohair, tung nuts, honey, Irish potatoes, and milk and butterfat.

Under authority of the Commodity Credit Corporation, PMA carries out storage facilities operations for (1) purchasing and maintaining granaries and equipment for care and storage of Corporation-owned or controlled grain in areas where commercial storage facilities are inadequate; (2) making loans for construction or expansion of farm storage facilities; (3) providing storage use guarantees to encourage the construction of commercial storage facilities; and (4) undertaking such other operations as may be necessary to provide storage adequate to carry out efficiently and effectively the Corporation's programs.

### PROGRAM FOR STABILIZATION OF SUGAR PRODUCTION AND MARKETING

The sugar program, authorized by the Sugar Act of 1948 sta-

bilizes prices through the regulation of imports of sugar from foreign areas and marketings of sugar produced in domestic areas. Under the sugar program, furthermore, PMA makes payments to domestic producers of sugar beets and sugarcane provided they comply with certain labor, wage, price, and marketing requirements prescribed by law.

### INTERNATIONAL COMMODITY AGREEMENT PROGRAM

The International Wheat Agreement is aimed at assuring markets for wheat to exporting countries and supplies of wheat to importing countries at equitable and stable prices. Under the Agreement, the United States is entitled to sell specified quantities of wheat to importing countries in each of the four marketing years beginning in 1949–50. The Agreement sets up certain maximum and minimum prices between which negotiations take place. PMA works with other Federal agencies and foreign governments in developing and extending commodity agreements to other commodities.

### SURPLUS REMOVAL, EXPORT AND DIVERSION PROGRAMS

Section 32 (of Public Law No. 320, 74th Cong.) provides that an amount equal to 30 percent of the gross receipts from duties collected under the customs laws during each calendar year shall be made available to the Secretary of Agriculture during each following fiscal year for carrying out authorized programs. Under Section 32, PMA makes payments to commercial exporters and others to encourage exports of surplus commodities; purchases surplus commodities and makes them available to school lunch programs, institutions, needy Indians on reservations, to persons certified by welfare agencies as eligible for relief; and makes payments to encourage diversion of surplus commodities from normal channels of trade to new markets and new uses. Under its program for marketing abundant foods, PMA promotes the marketing of such foods through normal distribution channels. Under the CCC Charter Act, PMA may export or otherwise assist in developing export markets.

### SUPPLY PROGRAMS

Procurement operations in connection with supply programs fall into three general categories: (1) Procurement for other Government agencies, principally the Economic Cooperation Administration, which administers the European Recovery Program, and for the Department of the Army, which administers civilian-feeding programs in occupied areas of the Far East; (2) limited procurement for foreign governments; and (3) procurement for international relief organizations.

### FOREIGN PURCHASE PROGRAMS

Under the Commodity Credit Corporation's charter, PMA is authorized to make purchases abroad of such foods, agricultural

commodities and products thereof and related facilities as are needed to meet domestic and foreign requirements.

### SCHOOL LUNCH PROGRAM

PMA administers the national school lunch program under authority of the National School Lunch Act of 1946. Through grants-in-aid to States, PMA provides financial assistance to public and private schools of high school grade or under operating nonprofit school lunch programs. These funds, which are to be used to purchase foods served in the lunches, are provided to schools on the basis of their need for assistance and the number of meals served. The Federal funds must be matched by funds from sources within the States.

The act also provides that part of the total appropriation for the school lunch program may be used by the Department to purchase, for direct distribution to participating schools, food to assist them in meeting minimum nutritional requirements and, wherever possible, provide an outlet for abundant foods. The act also provides that commodities purchased by the Department under authority of section 32 may be distributed to participating schools and to other schools operating nonprofit lunch programs.

### MARKETING AGREEMENT AND ORDER PROGRAMS

Marketing agreement and order programs, carried on under authority of the Agricultural Marketing Agreement Act of 1937, help to establish and maintain orderly marketing conditions for certain commodities and their products. Commodities for which marketing agreements and order programs were in effect in 1950 included milk, fruits, vegetables, nuts and hops. Milk-order programs establish minimum prices that handlers or distributors are required to pay producers. Programs for other commodities do not establish prices that must be paid producers, but prices are affected by controls over the quality, quantity, and rate of shipment from producing areas to market; the establishment of reserve pools and the control and disposition of surpluses.

### MARKETING RESEARCH AND STANDARDIZATION PROGRAMS

Marketing research is carried on to study ways and means of increasing the efficiency of marketing of agricultural commodities by means of better marketing practices, facilities, and equipment in such areas as assembling, handling, packing, packaging, transporting, storing, processing, wholesaling and retailing. Other research is intended to develop new uses for farm products and expand market outlets generally. PMA's marketing research programs are carried on under authority of the Research and Marketing Act of 1946, Marketing Farm Products Legislation in annual appropriation acts and other legislative authorities.

Standards of agricultural commodities are developed and maintained through studies of physical characteristics and factors affecting the marketing and utilization of such agricultural commodities and products thereof to provide a common language of quality

and condition for use by buyers and sellers. United States standards for grades, such as U. S. No. 1, U. S. Good, and U. S. Grade A, have been developed for most of the important farm commodities. Some standards are mandatory, such as those that apply to grain and cotton moving in interstate commerce on the basis of grade, to apples and pears for export, to tobacco sold on designated markets, and to products stored under authority of the United States Warehouse Act. Use of most of the standards, however, is permissive.

### MARKET NEWS, INSPECTION AND GRADING AND OTHER SERVICE PROGRAMS

PMA's grading and inspection programs are designed to certify to shippers and others in various locations the quality and condition of agricultural commodities and food products, taking into account standards, grades and other applicable factors. These programs are administered on a fee basis through (1) Federal employees, (2) Federal-State employees working under Federal supervision in accordance with the terms of applicable cooperative agreements and contracts and (3) licensed individuals working under Federal technical supervision in accordance with the terms of applicable agreements and contracts.

PMA administers a market news service to provide timely unbiased information to producers, processors, distributors and others to assist them in orderly marketing and distribution of farm commodities. Information is collected on supplies, demand, prices, movements, locations, quality, condition and other market data on farm products in specific markets and marketing areas. Information is disseminated through a network of leased telegraph lines, radio stations, newspapers, and direct mailing of reports.

### MARKETING REGULATORY PROGRAMS

PMA administers marketing regulatory programs of three general types designed collectively to protect farmers and others from financial loss or personal injury resulting from careless, deceptive and fraudulent marketing practices. One type regulates certain business practices of dealers in farm commodities; a second insures truth in certain labels such as those affixed to insecticide and seed packages and a third covers instances of mandatory inspections. These main types of regulations are found singly or in combinations in the regulatory laws such as the Packers and Stockyards Act; the Perishable Agricultural Commodities Act; the Federal Seed Act; the United States Warehouse Act; the Insecticide, Fungicide and Rodenticide Act; the United States Grain Standards Act; the Cotton Act; the Naval Stores Act; and the Tobacco Acts.

### OTHER PRODUCTION AND MARKETING PROGRAMS

State and county PMA committees administer Federal Crop Insurance programs in the counties having such programs, putting on active sales campaigns, educational programs, and all phases of crop insurance except loss adjustment work.

PMA is one of the agencies designated by the Secretary to assist in the preparation of comprehensive multi-purpose agricultural programs for the various river basins in the country. Such a program has already been prepared for the Missouri Basin and is subject to approval and authorization by Congress. Work of a similar nature is presently being inaugurated in the Columbia Basin. It is contemplated that similar programs will be prepared for the Colorado, Arkansas-Red, and the Rio Grande River Basins.

In connection with the flood control activities of the Department, facilities of the PMA Committee system are used in assisting the originating agencies in the preparation of flood control survey reports and in a review of these reports before submission by the Secretary of Agriculture to the Congress for authorization. For the calendar year 1950, the PMA organization is also assisting in the work of the President's Water Resources Policy Commission, which at the moment is reviewing the problems in connection with 12 different river basins. As a basis for their deliberation, the commission is preparing an inventory of needs and of existing facilities for meeting these needs as a basis on which to prepare their report to the President in which they will recommend (*a*) the extent and character of Federal participation in water resources programs, (*b*) priority of treatment from the standpoint of economic and social need, (*c*) criteria and standards for evaluating feasibility of water resources projects, and (*d*) desirable legislation or changes in existing legislation dealing with these problems.

PMA assists in the program for eradication of foot and mouth disease in Mexico by the purchase and disposition of Mexican canned meat.

PMA works closely with the Economic Cooperation Administration in determining requirements of and allocations to foreign countries.

Under Public Law 85 (81st Cong.) authorizing the Corporation to accept strategic and critical materials produced abroad in exchange for agricultural commodities acquired by the Corporation, PMA works with the Munitions Board of the National Military Establishment in arranging for exchanges of such commodities and materials.

Under Public Law 155, Eighty-first Congress, PMA administers the Agriculture-Import Order. That Order provides that importations of specified oil-bearing materials, fats, oils, rice and rice products may not be made without a license. This control is designed to facilitate orderly liquidation of government-owned stocks and the acquisition or distribution of products in world short supply.

## PMA ORGANIZATION

The organization of the Production and Marketing Administration consists of an Office of the Administrator, 9 commodity branches, 12 functional and staff branches or offices, 5 Area Management Offices, 2 Aerial Photographic Laboratories, 9 PMA Commodity Offices located in the field, and State, county, and community committees.

The personnel and facilities of PMA are used extensively by the

Commodity Credit Corporation in carrying out programs of the Corporation. The Administrator of PMA is the president of the CCC and a member of its board of directors. The Deputy Administrator and the four assistant administrators serve as vice presidents of the Corporation. The directors of the branches of PMA and the directors of PMA Commodity Offices are contracting officers of the Corporation and have authority to settle and adjust claims by and against the Corporation.

Following is a description of the functions of each of the organizational units of PMA and the names of the principal officers of these units.

### OFFICE OF THE ADMINISTRATOR

The Administrator is responsible for the formulation and administration of production and marketing programs and activities assigned to PMA by Secretary's Memorandum No. 1226 and other Secretary's Memoranda, including administration of programs and activities of the Commodity Credit Corporation. The Administrator establishes policies governing the formulation and administration of PMA programs and coordinates the execution of policies and programs carried out by Washington and field offices of the Administration.

The Administrator, who is President of the Commodity Credit Corporation and the chief executive officer of the Corporation, exercises general supervision and direction of all programs and affairs of the Corporation.

### ADMINISTRATOR'S PROGRAM STAFF

The Administrator's Program Staff assists the Administrator's Office in developing and coordinating PMA-wide program policies and plans.

H. I. Dunkleberger, *Chief*

### PRICE POLICY STAFF

The Price Policy Staff shall be responsible for making evaluations and policy recommendations concerning such matters as the use of price mechanisms to stimulate production, the effect of legal price minimum and other price provisions of the Defense Production Act of 1950, the relationship of price to allocation controls, the relationship of a sound pricing structure to the orderly distribution of foods, the effect of price on inventory management and the relationship of price to purchasing programs.

J. Murray Thompson, *Chief*

### OFFICE OF REQUIREMENTS AND ALLOCATIONS

The Office of Requirements and Allocations shall serve as a central coordinating point for formulating policies and procedures for developing requirements, determining available supplies and allocating supplies of food and other agricultural commodities.

F. Marion Rhodes, *Dir.*

### OFFICE OF MATERIALS AND FACILITIES

The Office of Materials and Facilities shall be responsible for and serve as the central coordinating point for developing basic policies and procedures governing the formulation of current and long-range requirements and determining such requirements for farm machinery, equipment and supplies.

L. B. Taylor, *Dir.*
W. R. Allstetter, *Deputy Dir.*

### ADMINISTRATOR'S FIELDMEN

The Administrator's Fieldmen assist and act for the Administrator, the Deputy Administrator, and the Assistant Administrators, in coordinating and carrying out PMA policies and programs in their respective geographic areas.

### STATE MARKETING SERVICES STAFF

The State Marketing Services Staff is responsible for establishing and maintaining cooperative relationship with State Departments of Agriculture in relation to marketing service programs under the Research and Marketing Act of 1946.

Leighton G. Foster, *Chief*

### PROCESSING PLANTS STAFF

The Processing Plants Staff administers programs to manage or dispose of government-owned processing plants and facilities.

Hulon O. Warlick, *Chief*

### NEW YORK CITY MARKETING STAFF

The New York City Marketing Staff administers within the greater New York area direct distribution and increased domestic utilization of agricultural commodities under the surplus removal, export and diversion programs, and provides assistance in related marketing service programs.

Chester A. Halnan, *Chief*

## OFFICE OF ASSISTANT ADMINISTRATOR FOR COMMODITY OPERATIONS

The Assistant Administrator for Commodity Operations is responsible for developing and integrating PMA's commodity opera-

tions programs. The Assistant Administrator has general operating responsibility for (1) the Price Support Programs, (2) Commodity Credit Corporation Supply Programs, (3) Commodity Credit Corporation Storage Programs, and (4) other programs relating to price stabilization through domestic diversion, export, surplus removal, and other means. The Assistant Administrator is responsible for the day-to-day direction of PMA Commodity Offices, the Fiscal Branch, the Price Support and Foreign Supply Branch, the Transportation and Warehousing Branch, and the Wheat Agreement Staff.

### WHEAT AGREEMENT STAFF

The Wheat Agreement Staff formulates policies relating to the International Wheat Agreement Program. It negotiates Governmental sales agreements with participating countries, assists in consummating commercial contracts, and establishes export subsidy rates for such contracts in exporting wheat and wheat flour.

Maurice M. Benidt, *Chief*

### OFFICE OF ASSISTANT ADMINISTRATOR FOR MANAGEMENT

Acting for the Administrator, the Assistant Administrator for Management is responsible for developing and integrating PMA's management program for increasing the efficiency and effectiveness of its program operations. The Assistant Administrator has general operating responsibility for the following activities: (1) Management improvement, (2) administrative services, (3) audit, (4) budget, (5) investigations, (6) personnel, (7) organization and management analysis service, and (8) reports. The Assistant Administrator is responsible for the day-to-day direction of the Office of Audit, Office of Administrative Services, Office of Budget, Office of Compliance and Investigation, Office of Personnel Services, the Program Management Staff and the Area Management Offices.

Gerald E. Tichenor, *Dep. Asst. Adm.*
Charles M. Cox, *Exec. Asst.*

### COMMODITY BRANCHES

The nine commodity branches are Cotton, Dairy, Fats and Oils, Fruit and Vegetable, Grain, Livestock, Poultry, Sugar, and Tobacco.

These branches formulate, direct, coordinate and carry out policies and programs relating to the production and marketing of assigned commodities, and coordinate their recommendations with

recommendations from PMA State Offices, other units and officials of PMA, the Department, and producer, trade and related groups in formulating policies and procedures. In the execution of policies and programs for which they are responsible, branches provide technical direction and coordination to their Washington divisions, their field offices, PMA State and County Offices, and PMA Commodity Offices and agents. They establish and maintain relationships with producer, trade and other groups for the purpose of obtaining and furnishing information and promoting harmonious relations and cooperation.

For commodities or functions assigned, the branches administer or assist in the administration of one or more of the following programs: (1) Price Support and Stabilization; (2) Production Adjustment; (3) Surplus Removal, Export and Diversion; (4) Stabilization of Sugar Production & Marketing; (5) Supply; (6) Foreign Purchase; (7) Marketing Agreements and Orders; (8) Marketing Research and Standardization; (9) Marketing Regulatory; (10) Market News, Inspection & Grading, and Related Service Programs.

In addition to basic agricultural legislation for price support, production adjustment and related programs, the following specific acts in the field of marketing research, service and regulatory programs are assigned to commodity branches.

Cotton Fiber Testing Act of 1941.
Cotton Futures Act of 1916.
Cotton Grade and Staple Statistics Act of 1927.
Cotton Service Testing Act of 1941.
Dairy Export Act of 1908.
Export Apple and Pear Act of 1933.
Federal Seed Act of 1939.
Insecticide, Fungicide and Rodenticide Act of 1947.
Naval Stores Act of 1923.
Packers and Stockyards Act of 1921.
Perishable Agricultural Commodities Act of 1930.
Produce Agency Act of 1927.
Standards Container Acts of 1916 and 1928.
Tobacco Compact Act of 1926.
Tobacco Inspection Act of 1935.
Tobacco Seed and Plant Exportation Act of 1940.
Tobacco Stocks and Standards Act of 1929.
United States Cotton Standards Act of 1923.
United States Grain Standards Act of 1916.
Wool Standards Act of 1928.
All other activities under the head "Marketing Services" in the annual Appropriation Act.

In administering these Acts and programs in the field of marketing research, service and regulatory activities, the commodity branches utilize field offices which are located at marketing centers and report directly to the branches. These individual field offices number approximately 559. Many are small, consisting of only one or two people. They are necessarily widely scattered in order to

meet the needs of individual markets and processors and distributors.

## PMA STATE, COUNTY AND COMMUNITY OFFICES AND COMMITTEES

County and community committees of farmers are elected by the farmers in a county. These county and community committeemen are used by the PMA in administering all programs dealing directly with farmers. State Committees appointed by the Secretary under authority of the above Act, are responsible for the administration of the PMA programs within the State.

These committees have a dual responsibility. In contacting the farmers of their respective areas and securing recommendations and suggestions in the formulation of programs, their responsibility is to the farm operator to provide programs and program provisions which will as nearly as possible fit the conditions prevailing. Recommendations of State, county and community committeemen are to the extent feasible, incorporated in National programs. These programs, when formulated are turned over to State, county and community committeemen for administration and thereafter their responsibility is to the Department to see that the programs are efficiently administered. Because of this two-way flow of information and administrative responsibility, the elected farmer committee system is considered the very core of the PMA administration.

PMA programs administered through State, county and community committees include the agricultural conservation, production adjustment, price support and stabilization, surplus removal and related programs and the sugar program. Their recommendations with respect to other PMA programs are also obtained.

## RURAL ELECTRIFICATION ADMINISTRATION

The Rural Electrification Administration administers two loan programs: (1) for rural electrification facilities and (2) for extension and improvement of rural telephone service.

Loans for rural electrification are made to cooperatives, public utility districts, municipalities and power companies to finance electric generation, transmission, and distribution facilities in order to bring electricity to persons in rural areas not receiving central station electric service. The Rural Electrification Act provides that preference shall be given to cooperatives and other non-profit organizations. It also authorizes loans to finance the wiring of rural establishments and the purchase of electrical equipment by those receiving service. There are slightly over 1,000 borrowers. More than 95 per cent of all Rural Electrification Administration funds have been lent to locally-owned, member-controlled cooperatives organized under State laws. All Rural Electrification Administration loans are self-liquidating. Loans are made on a maximum 35 year amortization basis with interest at two percent.

The Administrator is also authorized and empowered to make loans to persons now providing or who may hereafter provide telephone service in rural areas and to cooperative, non-profit, limited dividend or mutual associations. These loans are for the purpose of financing the improvements, expansion, construction, acquisition, and operation of telephone lines, facilities or systems to furnish and improve telephone service in rural areas. The Administrator is further authorized and empowered to make loans for the purpose of refinancing outstanding indebtedness of persons furnishing telephone service in rural areas where such financing is necessary in order to furnish and improve telephone service in rural areas.

The Rural Electrification Administration provides advisory assistance to borrowers in connection with the financing and construction of rural electric and rural telephone systems. This assistance, which is rendered on a selective basis, is primarily for the purpose of providing proper safeguards in the use of Federal funds and in helping borrowers in achieving area coverage, proper design of lines, and in problems concerning the management and operation of their systems.

With the exception of a small liaison office in Spokane, Washington, the Administration maintains no field offices. It has, however, a field staff of engineers, auditors, management advisors and rural electrification and telephone specialists.

## SOIL CONSERVATION SERVICE

The Soil Conservation Service gives assistance to farmers and ranchers chiefly through soil conservation districts which the farmers organize and operate under State laws. It gives technical assistance in conservation surveying, planning and application of suitable soil and water conserving practices on individual farms, watersheds, or other areas having common problems and such needed and requested equipment and special erosion-control planting materials as may be available.

Conservation practices used include agronomic, engineering, range, woodland, and wildlife measures applied in combinations suited to the land being treated. Planning and application of these practices are based on land capability surveys from which are determined the acre-by-acre needs of the land, depending on its soil

types, slope, degree of erosion, and other factors, and its fitness for a given type of agricultural production. By these means, the program helps to: prevent soil erosion, preserve natural resources, control floods, prevent impairment of reservoirs, maintain navigability of rivers and harbors, and protect public health.

In cooperation with the State agricultural experiment stations and others concerned, the Service conducts practical research for developing and improving conservation practices.

Water conservation and management is a major element in the Service's program. In addition to providing assistance in farm drainage and irrigation the Service engages in investigations and operations under the Flood Control Acts of 1936 and 1944, and supervises the agricultural phases of the water utilization program in Western States under the Case-Wheeler Act of 1939. It also makes and coordinates cooperative snow surveys for water forecasting in the Western States.

The Service manages and develops submarginal land obtained under Title III of the Bankhead Jones Farm Tenant Act of 1937 which also authorizes the purchase of submarginal lands when funds may be available. It conducts a special nurseries program to provide needed erosion-control plants.

# FIELD ACTIVITIES

## INTRODUCTION

This section of the Directory is a geographical directory showing the field activities of the Department of Agriculture listed by cities and towns where employees are located in the States, Territories, possessions, and in foreign countries.

The name in parentheses following the name of the city is the name of the county in which that particular city is located.

Work at each location is listed by bureaus. The following are the symbols of the bureaus, administrations, and offices:

## SYMBOLS OF BUREAUS HAVING FIELD ACTIVITIES

| *Administrations, Bureaus and Offices* | *Abbreviations* |

| Solicitor, Office of | Sol. |

Following the bureau symbol is a brief statement of the work at that installation. The figure in parentheses shows the number of permanent employees both full-time and part-time supervised by the name of the person listed next. This person listed is the individual with whom contacts might be made. A dagger (†) indicates employment on a cooperative basis with other Federal, State and local agencies.

Normally the work done at each FHA office, not shown on each individual listing, includes receiving applications, making loans, assisting borrowers with planning and carrying out farm-and-home plans, receiving repayments and handling other phases of local program administration.

Limitations of space have prevented listing the thousands of state cooperative Extension employees (county agents, home demonstration agents, etc.).
