Whereas multiple sclerosis is not genetic, contagious, or directly inherited, but studies show that there are genetic factors that indicate that certain individuals may be susceptible to the disease;

Whereas multiple sclerosis symptoms occur when an immune system attack affects the myelin in nerve fibers of the central nervous system, damaging or destroying the myelin and replacing the myelin with scar tissue, thereby interfering with or preventing the transmission of nerve signals;

Whereas there is no known cure for multiple sclerosis;

Whereas the Multiple Sclerosis Coalition, an affiliation of multiple sclerosis organizations dedicated to the enhancement of the quality of life for all those affected by multiple sclerosis, recognizes and celebrates Multiple Sclerosis Awareness Week;
