

118TH CONGRESS
1ST SESSION

S. 2739

To coordinate Federal research and development efforts focused on modernizing mathematics in STEM education through mathematical and statistical modeling, including data-driven and computational thinking, problem, project, and performance-based learning and assessment, interdisciplinary exploration, and career connections, and for other purposes.

IN THE SENATE OF THE UNITED STATES

SEPTEMBER 7, 2023

Ms. HASSAN (for herself and Mrs. BLACKBURN) introduced the following bill; which was read twice and referred to the Committee on Health, Education, Labor, and Pensions

A BILL

To coordinate Federal research and development efforts focused on modernizing mathematics in STEM education through mathematical and statistical modeling, including data-driven and computational thinking, problem, project, and performance-based learning and assessment, interdisciplinary exploration, and career connections, and for other purposes.

1 *Be it enacted by the Senate and House of Representa-*
2 *tives of the United States of America in Congress assembled,*

1 **SECTION 1. SHORT TITLE.**

2 This Act may be cited as the “Mathematical and Sta-
3 tistical Modeling Education Act”.

4 **SEC. 2. MATHEMATICAL AND STATISTICAL MODELING EDU-**
5 **CATION.**

6 (a) FINDINGS.—Congress finds the following:

7 (1) The mathematics taught in schools, includ-
8 ing statistical problem solving and data science, is
9 not keeping pace with the rapidly evolving needs of
10 the public and private sector, resulting in a STEM
11 skills shortage and employers needing to expend re-
12 sources to train and upskill employees.

13 (2) According to the Bureau of Labor Statis-
14 tics, the United States will need 1,000,000 addi-
15 tional STEM professionals than it is on track to
16 produce in the coming decade.

17 (3) The field of data science, which is relevant
18 in almost every workplace, relies on the ability to
19 work in teams and use computational tools to do
20 mathematical and statistical problem solving.

21 (4) Many STEM occupations offer higher
22 wages, more opportunities for advancement, and a
23 higher degree of job security than non-STEM jobs.

24 (5) The STEM workforce relies on computa-
25 tional and data-driven discovery, decision-making,
26 and predictions, from models that often must quan-

1 tify uncertainty, as in weather predictions, spread of
2 disease, or financial forecasting.

3 (6) Most fields, including analytics, science, eco-
4 nomics, publishing, marketing, actuarial science, op-
5 erations research, engineering, and medicine, require
6 data savvy, including the ability to select reliable
7 sources of data, identify and remove errors in data,
8 recognize and quantify uncertainty in data, visualize
9 and analyze data, and use data to develop under-
10 standing or make predictions.

11 (7) Rapidly emerging fields, such as artificial
12 intelligence, machine learning, quantum computing
13 and quantum information, all rely on mathematical
14 and statistical concepts, which are critical to prove
15 under what circumstances an algorithm or experi-
16 ment will work and when it will fail.

17 (8) Military academies have a long tradition in
18 teaching mathematical modeling and would benefit
19 from the ability to recruit students with this exper-
20 tise from their other school experiences.

21 (9) Mathematical modeling has been a strong
22 educational priority globally, especially in China,
23 where participation in United States mathematical
24 modeling challenges in high school and higher edu-
25 cation is orders of magnitude higher than in the

1 United States, and Chinese teams are taking a ma-
 2 jority of the prizes.

3 (10) Girls participate in mathematical modeling
 4 challenges at all levels at similar levels as boys, while
 5 in traditional mathematical competitions girls par-
 6 ticipate less and drop out at every stage. Students
 7 cite opportunity for teamwork, using mathematics
 8 and statistics in meaningful contexts, ability to use
 9 computation, and emphasis on communication as
 10 reasons for continued participation in modeling chal-
 11 lenges.

12 (b) DEFINITIONS.—In this section:

13 (1) DIRECTOR.—The term “Director” means
 14 the Director of the National Science Foundation.

15 (2) FEDERAL LABORATORY.—The term “Fed-
 16 eral laboratory” has the meaning given such term in
 17 section 4 of the Stevenson-Wydler Technology Inno-
 18 vation Act of 1980 (15 U.S.C. 3703).

19 (3) FOUNDATION.—The term “Foundation”
 20 means the National Science Foundation.

21 (4) INSTITUTION OF HIGHER EDUCATION.—The
 22 term “institution of higher education” has the
 23 meaning given such term in section 101(a) of the
 24 Higher Education Act of 1965 (20 U.S.C. 1001(a)).

1 (5) MATHEMATICAL MODELING.—The term
 2 “mathematical modeling” has the meaning given the
 3 term in the 2019 Guidelines for Assessment and In-
 4 struction in Mathematical Modeling Education
 5 (GAIMME) report, 2nd edition.

6 (6) OPERATIONS RESEARCH.—The term “oper-
 7 ations research” means the application of scientific
 8 methods to the management and administration of
 9 organized military, governmental, commercial, and
 10 industrial processes to maximize operational effi-
 11 ciency.

12 (7) STATISTICAL MODELING.—The term “sta-
 13 tistical modeling” has the meaning given the term in
 14 the 2021 Guidelines for Assessment and Instruction
 15 in Statistical Education II (GAISE II) report.

16 (8) STEM.—The term “STEM” means the aca-
 17 demic and professional disciplines of science, tech-
 18 nology, engineering, and mathematics.

19 (c) PREPARING EDUCATORS TO ENGAGE STUDENTS
 20 IN MATHEMATICAL AND STATISTICAL MODELING.—The
 21 Director shall provide grants on a merit-reviewed, com-
 22 petitive basis to institutions of higher education and non-
 23 profit organizations (or a consortium thereof) for research
 24 and development to advance innovative approaches to sup-
 25 port and sustain high-quality mathematical modeling edu-

1 cation in schools operated by local educational agencies,
 2 including statistical problem solving, data science, oper-
 3 ations research, and computational thinking. The Director
 4 shall encourage applicants to form partnerships to address
 5 critical transitions, such as middle school to high school,
 6 high school to postsecondary education, and school to in-
 7 ternships and jobs.

8 (d) APPLICATION.—An entity seeking a grant under
 9 subsection (c) shall submit an application at such time,
 10 in such manner, and containing such information as the
 11 Director may require. The application shall include the fol-
 12 lowing:

13 (1) A description of the target population to be
 14 served by the research activity for which such grant
 15 is sought, including student subgroups described in
 16 section 1111(b)(2)(B)(xi) of the Elementary and
 17 Secondary Education Act of 1965 (20 U.S.C.
 18 6311(b)(2)(B)(xi)), and students experiencing home-
 19 lessness and children and youth in foster care.

20 (2) A description of the process for recruitment
 21 and selection of students, educators, or local edu-
 22 cational agencies to participate in such research ac-
 23 tivity.

24 (3) A description of how such research activity
 25 may inform efforts to promote the engagement and

1 achievement of students in prekindergarten through
 2 grade 12 in mathematical modeling and statistical
 3 modeling using problem-based learning with
 4 contextualized data and computational tools.

5 (4) In the case of a proposal consisting of a
 6 partnership or partnerships with 1 or more local
 7 educational agencies and 1 or more researchers, a
 8 plan for establishing a sustained partnership that is
 9 jointly developed and managed, draws from the ca-
 10 pacities of each partner, and is mutually beneficial.

11 (e) PARTNERSHIPS.—In awarding grants under sub-
 12 section (c), the Director shall encourage applications that
 13 include—

14 (1) partnership with a nonprofit organization or
 15 an institution of higher education that has extensive
 16 experience and expertise in increasing the participa-
 17 tion of students in prekindergarten through grade
 18 12 in mathematical modeling and statistical mod-
 19 eling;

20 (2) partnership with a local educational agency,
 21 consortium of local educational agencies, or Tribal
 22 educational agencies;

23 (3) an assurance from school leaders to making
 24 reforms and activities proposed by the applicant a
 25 priority;

1 (4) ways to address critical transitions, such as
 2 middle school to high school, high school to postsec-
 3 ondary education, and school to internships and
 4 jobs;

5 (5) input from education researchers and cog-
 6 nitive scientists, as well as practitioners in research
 7 and industry, so that what is being taught is up-to-
 8 date in terms of content and pedagogy;

9 (6) a communications strategy for early con-
 10 versations with parents, school leaders, school
 11 boards, community members, employers, and other
 12 stakeholders; and

13 (7) resources for parents, school leaders, school
 14 boards, community members, and other stakeholders
 15 to build skills in modeling and analytics.

16 (f) USE OF FUNDS.—An entity that receives a grant
 17 under this section shall use the grant funds for research
 18 and development activities to advance innovative ap-
 19 proaches to support and sustain high-quality mathe-
 20 matical modeling education in public schools, including
 21 statistical modeling, data science, operations research, and
 22 computational thinking, which may include—

23 (1) engaging prekindergarten through grade 12
 24 educators in professional learning opportunities to
 25 enhance mathematical modeling and statistical prob-

1 lem solving knowledge, and developing training and
2 best practices to provide more interdisciplinary
3 learning opportunities;

4 (2) conducting research on curricula and teach-
5 ing practices that empower students to choose the
6 mathematical, statistical, computational, and techno-
7 logical tools that they will apply to a problem, as is
8 required in life and the workplace, rather than pre-
9 scribing a particular approach or method;

10 (3) providing students with opportunities to ex-
11 plore and analyze real data sets from contexts that
12 are meaningful to the students, which may include—

13 (A) missing or incorrect values;

14 (B) quantities of data that require choice
15 and use of appropriate technology;

16 (C) multiple data sets that require choices
17 about which data are relevant to the current
18 problem; and

19 (D) data of various types including quan-
20 tities, words, and images;

21 (4) taking a school or district-wide approach to
22 professional development in mathematical modeling
23 and statistical modeling;

24 (5) engaging rural local educational agencies;

1 (6) supporting research on effective mathe-
2 matical modeling and statistical modeling teaching
3 practices, including problem- and project-based
4 learning, universal design for accessibility, and ru-
5 brics and mastery-based grading practices to assess
6 student performance;

7 (7) designing and developing pre-service and in-
8 service training resources to assist educators in
9 adopting transdisciplinary teaching practices within
10 mathematics and statistics courses;

11 (8) coordinating with local partners to adapt
12 mathematics and statistics teaching practices to le-
13 verage local natural, business, industry, and commu-
14 nity assets in order to support community-based
15 learning;

16 (9) providing hands-on training and research
17 opportunities for mathematics and statistics edu-
18 cators at Federal laboratories or institutions of high-
19 er education, or in industry;

20 (10) developing mechanisms for partnerships
21 between educators and employers to help educators
22 and students make connections between their mathe-
23 matics and statistics projects and topics of relevance
24 in today's world;

1 (11) designing and implementing professional
2 development courses and experiences, including men-
3 toring for educators, that combine face-to-face and
4 online experiences;

5 (12) addressing critical transitions, such as
6 middle school to high school, high school to postsec-
7 ondary education, and school to internships and
8 jobs; and

9 (13) any other activity the Director determines
10 will accomplish the goals of this section.

11 (g) EVALUATIONS.—All proposals for grants under
12 this section shall include an evaluation plan that includes
13 the use of outcome-oriented measures to assess the impact
14 and efficacy of the grant. Each recipient of a grant under
15 this section shall include results from these evaluative ac-
16 tivities in annual and final projects.

17 (h) ACCOUNTABILITY AND DISSEMINATION.—

18 (1) EVALUATION REQUIRED.—The Director
19 shall evaluate the portfolio of grants awarded under
20 this section. Such evaluation shall—

21 (A) use a common set of benchmarks and
22 tools to assess the results of research conducted
23 under such grants and identify best practices;
24 and

1 (B) to the extent practicable, integrate the
 2 findings of research resulting from the activities
 3 funded through such grants with the findings of
 4 other research on student's pursuit of degrees
 5 or careers in STEM.

6 (2) REPORT ON EVALUATIONS.—Not later than
 7 180 days after the completion of the evaluation
 8 under paragraph (1), the Director shall submit to
 9 Congress and make widely available to the public a
 10 report that includes—

11 (A) the results of the evaluation; and

12 (B) any recommendations for administra-
 13 tive and legislative action that could optimize
 14 the effectiveness of the grants awarded under
 15 this section.

16 (i) AUTHORIZATION OF APPROPRIATIONS.—For each
 17 of fiscal years 2024 through 2028, there are authorized
 18 out of funds appropriated to the National Science Founda-
 19 tion, \$10,000,000 to carry out the activities under this
 20 section.

21 **SEC. 3. NASEM REPORT ON MATHEMATICAL AND STATIS-**
 22 **TICAL MODELING EDUCATION IN PRE-**
 23 **KINDERGARTEN THROUGH GRADE 12.**

24 (a) STUDY.—Not later than 60 days after the date
 25 of enactment of this Act, the Director shall seek to enter

1 into an agreement with the National Academies of
2 Sciences, Engineering and Medicine (in this section re-
3 ferred to as “NASEM”) (or if NASEM declines to enter
4 into such an agreement, another appropriate entity) under
5 which NASEM, or such other appropriate entity, agrees
6 to conduct a study on the following:

7 (1) Factors that enhance, or barriers to, the
8 implementation of mathematical modeling and sta-
9 tistical modeling in elementary and secondary edu-
10 cation, including opportunities for, and barriers to,
11 use modeling to integrate mathematical and statis-
12 tical ideas across the curriculum, including the fol-
13 lowing:

14 (A) Pathways in mathematical modeling
15 and statistical problem solving from kinder-
16 garten to the workplace so that students are
17 able to identify opportunities to use their school
18 mathematics and statistics in a variety of jobs
19 and life situations and so that employers can
20 benefit from students’ school learning of data
21 science, computational thinking, mathematics,
22 statistics, and related subjects.

23 (B) The role of community-based prob-
24 lems, service-based learning, and internships for

1 connecting students with career preparatory ex-
 2 periences.

3 (C) Best practices in problem-, project-,
 4 and performance-based learning and assess-
 5 ment.

6 (2) Characteristics of teacher education pro-
 7 grams that successfully prepare teachers to engage
 8 students in mathematical modeling and statistical
 9 modeling, as well as gaps and suggestions for build-
 10 ing capacity in the pre-service and in-service teacher
 11 workforce.

12 (3) Mechanisms for communication with stake-
 13 holders, including parents, administrators, and the
 14 public, to promote understanding and knowledge of
 15 the value of mathematical modeling and statistical
 16 modeling in education.

17 (b) PUBLIC STAKEHOLDER MEETING.—In the course
 18 of completing the study described in subsection (a),
 19 NASEM or such other appropriate entity shall hold not
 20 less than one public meeting to obtain stakeholder input
 21 on the topics of such study.

22 (c) REPORT.—The agreement under subsection (a)
 23 shall require NASEM, or such other appropriate entity,
 24 not later than 24 months after the effective date of such
 25 agreement, to submit to the Secretary of Education and

1 the appropriate committees of jurisdiction of Congress a
2 report containing—

3 (1) the results of the study conducted under
4 subsection (a);

5 (2) recommendations to modernize the proc-
6 esses described in subsection (a)(1); and

7 (3) recommendations for such legislative and
8 administrative action as NASEM, or such other ap-
9 propriate entity, determines appropriate.

10 (d) AUTHORIZATION OF APPROPRIATIONS.—For fis-
11 cal year 2024, there are authorized out of funds appro-
12 priated to the National Science Foundation, \$1,000,000
13 to carry out the activities under this section.

○
