

When Dr. Woodson, the Father of Black History, was earning his bachelor's and master's degrees at the University of Chicago, this country had only the slightest respect for people of color. Dr. Wilson's devotion to ensuring that Blacks would escape "the awful fate of becoming a negligible factor in world thought" was ridiculed and attacked. However, in the end he prevailed and pioneered the celebration of Negro History Week, now Black History Month. The theme for this year's celebration is "Heritage and Horizons: The African American Legacy and the Challenge of the 21st Century."

The African American legacy in my home state of Illinois is great. Illinois is the birthplace of prominent African American writers such as Ellis Cose, Charles Johnson and Lorraine Hansberry. Illinois' native sons, James Cleveland and Miles Davis, are two of the world's greatest musical composers who transcend racial lines. And beloved daughter of Illinois, Katherine Dunham, dancer and choreographer, continues to bring the tradition of great African dance to a wide audience.

In addition to a rich history in the arts, African American Illinoisans also have played a significant role in state, local and federal government. Consider, for example, John Jones, the first African American elected to any public office in Cook County; Floy Clements, the first woman elected to the Illinois legislature; Harold Washington, former mayor of Chicago; and Carol Moseley-Braun, the first African American woman elected to the United States Senate. These African Americans, like those who have come before them, continue to shape our nation's history and inspire new generations of African Americans.

Today's African Americans have made great strides and overcome a variety of color barriers. The unemployment rate for African Americans has fallen from 14.2% in 1992 to 8.3% in 1999, the lowest annual level on record. The real wages of African Americans have risen rapidly, over 5% in the past two years. Moreover, while the African American child poverty rate is still too high, it fell to 36.7% in 1998, the lowest level on record. However, as these data suggest, there is still more work to be done.

The rate of firearm-related injuries is still unacceptably high. Racial profiling on our highways and in our airports and housing developments continues to be a serious problem. The rising cost of tuition continues to place ethnic minorities at an academic and economic disadvantage. The poor conditions and quality of too many of our schools keep children from low socioeconomic households from breaching the digital divide. Racial disparities in mental health and health care are pervasive in our society. And in the Chicago metropolitan area, after a two year decline, the number of reported AIDS cases has jumped 24 percent. Although African Americans represent

13% of the US population, they account for more than half of new HIV infections.

AIDS knows no boundaries. This month, as we examine and reflect on the legacy and challenges of African Americans, we must not forget our brothers and sisters in Africa. Approximately 23.3 million adults and children are infected with HIV in sub-Saharan Africa, which has about 10% of the world's population but nearly 70% of the world's infected people. I recently witnessed the devastation of this deadly virus first hand—isolation, prejudice, and a multitude of new orphans. This month, as we celebrate the heritage and horizons of African Americans, we must ask ourselves, what is on the horizon for our African brothers and sisters?

These are just some of the problems which require our attention if we are to fulfill the dreams of visionaries like Dr. Woodson, Dr. Martin Luther King, Jr., and other African Americans who continue to serve as role models for all Americans. Dr. Woodson believed in looking back in order to look forward. In this special month that seeks to learn from the past and shape our future, we need to examine how to build on the legacy of hope left to us from those who have gone before us.

As we move forward into this new millennium, let us extend Dr. Woodson's mission past the month of February and make it part of the fabric of our lives. Let us look to our forefathers, no matter what their race, creed, or color, and unite in our diversity to build one America and to build a world where every child has hope for the future.●

#### THE BOY SCOUTS OF AMERICA 90TH ANNIVERSARY

● Mr. GRAMS. Mr. President, I rise today to pay tribute to the Boy Scouts of America on the occasion of the 90th anniversary of its founding.

From its beginning in 1911, the Boy Scouts has grown in size to more than five million active members in 1999. In the 90 years since its origination, the Boy Scouts has influenced more than 100 million boys, young men, and women. Minnesota scouting officials estimate that in my home state, more than 100,000 young people participate in the program today.

Using goal setting and team building, Boy Scouts develop skills to overcome obstacles through trial and error. Whether earning their next merit badge or learning how to properly interact with the environment, Boy Scouts are able to translate what they have learned through the program into their families, churches, and communities.

Let me also take a moment to commend the almost 500,000 adult volunteers, including 24,000 Minnesotans, who serve as leaders for the Boy Scouts. Both men and women serve the Boy Scouts in various capacities rang-

ing from unit leaders to merit badge counselors. The Boy Scouts of America would certainly not be possible if it were not for the efforts of these stalwart volunteers.

Although times have changed, fads come and go, the Boy Scouts continue to be an effective tool in training our nation's youth. Through the Scouts' core values of helping other people at all times and keeping themselves physically strong, mentally awake, and morally straight, scouts impact our communities in many ways. Students who have been through the Boy Scout program and have adopted these values as their own are needed now more than ever before.

Over the years, the Boy Scouts have produced many of the country's most respected civic, professional, and community leaders. Right here in the Senate, 66 of my fellow colleagues have served as a scout, a leader, or in some cases, both. With all that the Boy Scouts have done for our country, I hope its next 90 years will be as productive as these first 90 have been.

On this 90th anniversary of the founding of the Boy Scouts of America, I wish my very best to the Boy Scouts, not only in Minnesota, but to Scouts across our great Nation.●

#### AMERICAN HEART MONTH

● Mr. GRAMS. Mr. President, I rise today to recognize February as American Heart Month. As its sponsoring organization, the American Heart Association (AHA) plays a major role in advocacy at both the national and local levels through activities to increase public awareness of health concerns. Their messages this month is "Be an American Heartsaver! Know the warning signs of heart attack. Call 9-1-1. Give CPR."

These three simple steps are aimed at reducing the number of lives lost every day—nearly 700—because the victims were unable to reach a hospital in time. The harsh fact is that cardiovascular diseases are the number one killer of men and women. In 1997, 34 percent of deaths from cardiovascular disease occurred prematurely, before the victims reached age 75. In total, more than 953,000 deaths were due to cardiovascular disease in 1997; 47 percent of those victims were women and 53 percent men.

During American Heart Month, thousands of AHA volunteers across the country canvass neighborhoods to raise funds and provide educational information about cardiovascular diseases and stroke. This is where the AHA makes its mark through its steadfast pursuit to reduce disability and death from cardiovascular diseases and stroke. By educating the American public about the early warnings signs of heart attacks and stroke, the members and volunteers of the AHA know that individuals will be better prepared to save themselves—and others around them.

The AHA has produced educational kits for Americans of all ages. Accordingly to the AHA, helping children understand the early warning signs of heart problems can have a tremendous impact when their family is concerned. Cardiopulmonary resuscitation classes provide Americans, regardless of their age, with the tools to assist in cardiac emergencies.

With the many advances medical science has experienced, the list of measures we can take in prevention of cardiovascular disease continues to grow. Controlling high blood pressure and cholesterol, becoming active through regular exercise, and stopping smoking are some of the easiest steps to reducing the risk of cardiovascular disease.

The AHA has emphasized these measures in the hopes of reducing cardiovascular disease, stroke, and the risk of these diseases by 25 percent over the next eight years. In addition, the AHA runs an Active Partnership program for cardiac patients to help them take responsibility for reducing their cardiovascular risks in the future.

My state of Minnesota has long been on the frontline of health care and a Centers for Disease Control and Prevention study released last week indicated Minnesota as having the lowest occurrence of cardiovascular disease among women nationwide. We must continue to reduce the occurrence of cardiovascular disease in Minnesota, but the study suggests we are already heading in the right direction.

As American Heart Month comes to a close, I commend the American Heart Association and its army of volunteers for putting their hearts to work to see that the hearts of others continue to beat a little bit longer and a little bit stronger. They join a long list of health care-related organizations, professionals, and industries making Minnesota a healthier place to live.●

#### NATIONAL ENGINEERS WEEK

● Mr. GRAMS. Mr. President, I rise today to pay tribute to those men and women who have made the world we live in a better place through advances in engineering. Since 1951, the week that includes George Washington's birthday has been dedicated as National Engineers Week (EWeek) to increase public awareness and appreciation of the engineering profession and technology. Our first president began his career with agricultural, military, and land surveying skills leading to his later recognition as the nation's "first engineer."

Last year's EWeek summit on "The Business of Diversity" gathered more than 100 business, government, and engineering leaders in Washington to find ways to increase the number of women and minorities in today's engineering workforce. This year, February 20-26 will be filled with activities designed by engineers for future engineers. Through national and local activities,

students, women, and minorities are the focus of a campaign designed to interest them in a future in engineering.

"Discover E" is a program in which engineers visit K-12 classrooms to answer questions and interact with students in designing and building small projects. The Future City Competition is for seventh and eight grade students, and the National Engineering Design Challenge is a high school program involving teams of students, teachers, and engineer mentors. All of these activities are geared toward introducing students in an interactive, hands-on way to engineering basics and open their eyes to the engineering inventions that are part of their daily lives.

Hundreds of 3M engineers in Minneapolis/St. Paul and throughout the country will visit local schools. In Minneapolis, 3M is organizing a reception involving some of the minority engineering student groups at the University of Minnesota and other local colleges. There, 3M engineers will talk about career planning and other experiences. Also in Minneapolis, The Works, a museum for the entire family, makes learning about technology interesting, understandable, and fun. The Works was created in 1995 with many hands-on, minds-on exhibits about technology centered on kids ages 5-15.

Schools have traditionally focused their teachings on the body of scientific knowledge, oftentimes neglecting the process of discovery that engineers use to help create new advances for our modern world. With the support of sponsors like 3M and NASA, programs during EWeek integrate this process of discovery and the use of technology into mathematics, science, language arts, and other topics. I am a strong supporter of exposing our children to the world around them and hope this awareness will get them involved and spark their interest in the future of engineering.

EWeek also recognizes the countless engineers who have influenced nearly every aspect of our lives as a result of their dedicated work and the numerous technological advances they inspired. These contributions were honored at a luncheon in Washington on February 22 naming the 20 Greatest Engineering Achievements of the 20th Century. The winners were chosen for their impact on the quality of life in the 20th Century, and range from the harnessing of electricity to computer, telephones, and even air conditioning.

These are just a few of the many events planned across America this week to urge today's youth from all backgrounds to consider a career in engineering. As someone who, early in my career, worked for an engineering firm, I appreciate this effort tremendously. I wish to send out my thanks to everyone who helps make the EWeek events possible, and the field of engineering exciting and entertaining.●

#### APPOINTMENT

The PRESIDING OFFICER. The Chair, on behalf of the President pro tempore, pursuant to provisions of Public Law 106-79, appoints the following Senators to the Dwight D. Eisenhower Memorial Commission: The Senator from Hawaii (Mr. INOUE) and the Senator from Rhode Island (Mr. REED).

#### ORDERS FOR THURSDAY, FEBRUARY 24, 2000

Mr. COVERDELL. Mr. President, I ask unanimous consent that when the Senate completes its business today, it adjourn until the hour of 11:30 a.m. on Thursday, February 24. I further ask unanimous consent that on Thursday, immediately following the prayer, the Journal of proceedings be approved to date, the morning hour be deemed expired, the time for the two leaders be reserved for their use later in the day, and the Senate then proceed to a vote on the Iran nonproliferation bill as under the previous order.

The PRESIDING OFFICER. Without objection, it is so ordered.

#### PROGRAM

Mr. COVERDELL. Mr. President, for the information of all Senators, the Senate will convene at 11:30 a.m. on Thursday and immediately proceed to a vote on final passage of H.R. 1883, the Iran nonproliferation bill. Following the vote, the Senate will resume consideration of S. 1134, which we have been discussing this afternoon, the education savings account bill. The Senate may also turn to any other legislative or Executive Calendar items cleared for action. Members are reminded that the first vote for tomorrow will occur at 11:30 a.m. and further votes are expected throughout the day.

#### ORDER FOR ADJOURNMENT

Mr. COVERDELL. Mr. President, if there is no further business to come before the Senate, I ask that the Senate stand in adjournment under the previous order following the remarks of Senator WYDEN of Oregon.

The PRESIDING OFFICER. Without objection, it is so ordered.

The PRESIDING OFFICER. The Senator from Oregon.

#### THANKING SENATOR COVERDELL

Mr. WYDEN. Mr. President, before he leaves the floor, I thank the Senator from Georgia for graciously expediting my opportunity to speak this afternoon. I know he has been dealing with a bill of great importance to him. I thank him for his thoughtfulness this afternoon.

#### PRESCRIPTION DRUGS AFFORDABILITY

Mr. WYDEN. Mr. President, for many months now I and other Members of
